The impact of adolescent health risk behaviors remains a primary concern of citizens throughout the country. Many health problems experienced by adolescents are caused by a very few preventable behaviors. Patterns of alcohol, tobacco, and other drug (ATOD) use and related risk behaviors are often formed during adolescence. These patterns play an important role in health throughout adulthood.

This report presents results from the fall 2002 Healthy Youth Survey in Washington State. For each item, local results appear in the first two columns and statewide results appear in the second two columns. The number of valid responses ("*n*") appears in parentheses for each item. Survey items covering the same topics are grouped together (the item numbering is specific to this report and does not necessarily reflect the item order on the actual survey). The bulleted points and graphs included at the beginning of this report highlight selected findings from the report. Additional information may be found in the *Interpretive Guide* that accompanied this report.

Key to the Notes

The survey was administered in 3 versions. Forms A and B were administered to students in Grades 8, 10, and 12. These two forms contained a core set of common items and additional items unique to each form. Form C was administered to students in Grade 6. This form consisted primarily of questions drawn from Forms A and B but also included some unique items. Several items on each form were optional at the discretion of the school; schools that did not administer the optional questions tore off the last page of the survey booklet. The following notes are used throughout this report to document the differences between the items on different versions and note the optional items:
A = wording on Form A
B = wording on Form B
C = wording on Form C
° = answer choices presented in a different order on one or more versions of the survey
† = optional item

Highlights of the Local Results

Your students and students statewide reported the following behaviors and attitudes:

	Your students		Statewide	
▪ Smoking cigarettes in the past 30 days (see item 25)	9.0%	(± 2.1%)	9.2%	(± 1.1%)
▪ Drinking alcohol in the past 30 days (see item 31)	21.3	(± 3.0)	17.8	(± 1.5)
▪ Using marijuana or hashish in the past 30 days (see item 32)	11.1	(± 2.3)	10.4	(± 1.1)
▪ Carrying a weapon in the past 30 days (see item 111)	6.8	(± 1.8)	9.4	(± 0.9)
▪ Carrying a weapon at school in the past 30 days (see item 112)	3.1	(± 1.3)	5.5	(± 0.7)
▪ Being bullied in the past 30 days (see item 136)	28.9	(± 3.4)	29.6	(± 1.9)
▪ Enjoyed being in school over the past year (see item 182)	50.4	(± 3.7)	44.7	(± 1.5)
▪ Feeling safe at school (see item 193)	84.9	(± 2.6)	79.6	(± 2.0)

Alcohol, Tobacco, and Other Drug Use

Alcohol, tobacco, and other drug use has been a major concern in this country for many years. The consequences of ATOD use are well known. In the short term, ATOD use interferes with positive physical, emotional, and social development. In the long term, ATOD use is associated with delinquency and criminal activity, unintended injuries, and a variety of health complications including shorter life expectancy. The economic costs of ATOD use are enormous (in Washington State an estimated $1.81 billion in 1990 and $2.54 billion in 1996). Tobacco use is the world's leading cause of preventable death, disease, and disability. This section provides information about lifetime ATOD use (which in part reflects experimental use), use in the past 30 days (i.e., current use), other tobacco-related questions, and other alcohol- and drug-related questions.

Lifetime Use

12. Have you ever smoked a cigarette, even just a puff? (Computed from item 215.)	Local (*n* = 344)		State (*n* = 3,479)

Other Health Concerns

This section provides results regarding other health concerns including nutrition and fitness, health conditions and health care, safety, behaviors related to intentional injury, and depression. Proper nutrition and exercise are critical components of a healthy life, as is access to preventive health care. Safety-related behaviors, such as wearing a seat belt when in a moving vehicle, can profoundly influence the outcome of an accident. Injury is the leading cause of death for adolescents aged 10 to 19, and violence contributes to injury-related deaths. People who are depressed experience a range of symptoms, and depression is associated with suicidal behavior.

Nutrition and Fitness

74. Overweight: "Overweight" includes students who are in the top 5% for body mass index by age and gender based on growth charts developed by the Centers for Disease Control and Prevention (2000). "At risk for overweight" includes students who are in the top 15% but not the top 5%. (Computed from numeric responses to "How tall are you without your shoes on?" and "How much do you weigh without your shoes on?")	Local (*n* = 292)		State (*n* = 2,956)	
Overweight	17.1%	(± 4.3%)	11.2%	(± 1.4%)

Risk and Protective Factor Scale Results

Decades of research have shown that certain risk factors are associated with increased likelihood of health risk behaviors including ATOD use, violence, and delinquent behaviors. Similarly, research has shown that protective factors exert a positive influence against the negative influence of risk factors. The survey included substantial coverage of risk and protective factors based on the work of Drs. Hawkins and Catalano and associates at the University of Washington. The premise of the risk reduction and protective factor enhancement approach to prevention is that preventing a problem before it occurs requires addressing the factors that predict the problem. Ideally, this strategy entails discovering the causes of the problem behavior and influencing those causes. Many of the survey items were used to assess students' status on risk and protective factors in the community, school, and peer-individual domains. Composite scales were computed for use in local program planning.

Risk Factors

For each scale, the percentage of students who are at risk (i.e., who agreed with statements that predict ATOD use or other problem behaviors) is listed. Higher percentages indicate that more students are likely to engage in problem behaviors. These percentages are based on computational methods provided by the University of Washington's Social Development Research Group.

Community Risk Factors

Antisocial behavior among familiar adults (Items 240–243)	42.6%	(± 5.2%)	39.5%	(± 2.9%)

Protective Factors

For each scale, the percentage of students who are resilient (i.e., who agreed with statements that predict the ability to resist ATOD use or other problem behaviors) is listed. Higher percentages indicate that fewer students are likely to engage in problem behaviors. These percentages are based on computational methods provided by the University of Washington's Social Development Research Group.

Number of Risk or Protective Factors (Excluding optional Family scales)

Although individual risk and protective factors serve as modest predictors of problem behaviors, students with multiple risk factors (or few protective factors) are much more likely to use ATOD or engage in other problem behaviors than are their peers. This section reports the percentage of students with given numbers of risk and protective factors. The number of risk factors was calculated only for students who answered enough items to receive scores on all risk factors included in the survey; the number of protective factors was similarly calculated. Readers should remember as they interpret the results that the number of risk factors included in the survey has changed over time.
