REPORT

OF THE

COMMISSIONERS OF THE LAND OFFICE

FOR THE YEAR 1910

ALBANY:

August, 1959

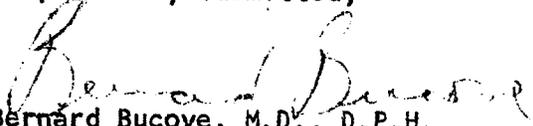

The Honorable Albert D. Rosellini
Governor, The State of Washington
Olympia, Washington

Honorable Sir:

I have the pleasure of submitting the Vital
Statistics Summary Report of the State Department of
Health for the calendar year 1958.

The report presents vital statistics data in
narrative, graphic and tabular form for use in public
health, demographic and related fields.

Respectfully submitted,

Bernard Bucove, M.D., D.P.H.
State Director of Health

INTRODUCTION

This report presents data on livebirths, deaths, fetal deaths (stillbirths) for the calendar year 1958 and the estimated population for the State of Washington as of July 1, 1958. Most data are reported for the state as a whole, each county and each city of 10,000 population or more.

Vital statistics data included in this report are identified either as residence data or occurrence data. Residence data refer to vital events involving residents of the area regardless of where the vital events actually occurred. Occurrence data refer to vital events actually occurring in the area regardless of the place of residence of the person or persons involved. In general, data presented on a residence basis are more useful.

Appendix tables contain tuberculosis morbidity data, marriage and divorce data for the calendar year 1958.

Certain additional data including data for cities of 2,500 to 10,000 population in 1950 are available in unpublished form in the files of the Public Health Statistics Section.

Investment in the
of 1954
The amount of investment
in the year 1954 was
\$100 million. This was
an increase of 10% over
the amount invested in
1953. The increase was
due to a number of factors,
including a rise in the
price of raw materials,
an increase in the cost of
labor, and a general
improvement in the
economy. The investment
in 1954 was also
influenced by the fact
that the government had
increased its spending
on infrastructure projects,
which had a stimulative
effect on the economy.

The first part of the report deals with the general situation in the country and the progress of the work during the year.

The second part of the report deals with the results of the work during the year and the progress of the work during the year.

The third part of the report deals with the results of the work during the year and the progress of the work during the year.

The fourth part of the report deals with the results of the work during the year and the progress of the work during the year.

The fifth part of the report deals with the results of the work during the year and the progress of the work during the year.

The sixth part of the report deals with the results of the work during the year and the progress of the work during the year.

The seventh part of the report deals with the results of the work during the year and the progress of the work during the year.

The eighth part of the report deals with the results of the work during the year and the progress of the work during the year.

The ninth part of the report deals with the results of the work during the year and the progress of the work during the year.

The tenth part of the report deals with the results of the work during the year and the progress of the work during the year.

The eleventh part of the report deals with the results of the work during the year and the progress of the work during the year.

The twelfth part of the report deals with the results of the work during the year and the progress of the work during the year.

The thirteenth part of the report deals with the results of the work during the year and the progress of the work during the year.

The fourteenth part of the report deals with the results of the work during the year and the progress of the work during the year.

The fifteenth part of the report deals with the results of the work during the year and the progress of the work during the year.

Table 35 - Infant Mortality: Residence, by Race for Counties and Cities of 10,000 Population and Over, 1958	82

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

Furthermore, it is noted that the records should be kept in a secure and accessible location. Regular backups are recommended to prevent data loss in the event of a system failure or disaster. The document also mentions the need for periodic audits to ensure the integrity and accuracy of the information stored.

In addition, the document highlights the role of technology in streamlining record-keeping processes. Modern accounting software can automate many tasks, reducing the risk of human error and saving valuable time. It is suggested that organizations should invest in reliable software solutions that offer robust security features and user-friendly interfaces.

Finally, the document stresses the importance of training staff on proper record-keeping procedures. Ensuring that all employees understand their responsibilities and the correct way to handle financial data is crucial for maintaining high standards of accuracy and compliance.

The second part of the document focuses on the legal and regulatory requirements surrounding record-keeping. It outlines the various laws and regulations that govern how financial records must be maintained, including retention periods and access restrictions. Organizations must be aware of these requirements to avoid potential penalties and legal issues.

It is also noted that the records should be kept in a format that is compatible with current and future technologies. This ensures that the information remains accessible and usable over the long term. The document provides guidance on how to structure the records to facilitate easy retrieval and analysis, as well as how to handle sensitive information to maintain confidentiality.

In conclusion, the document serves as a comprehensive guide for organizations looking to improve their record-keeping practices. By following the outlined principles and recommendations, businesses can ensure that their financial data is accurate, secure, and compliant with all applicable laws and regulations.

PHYSICS DEPARTMENT

CHICAGO, ILLINOIS

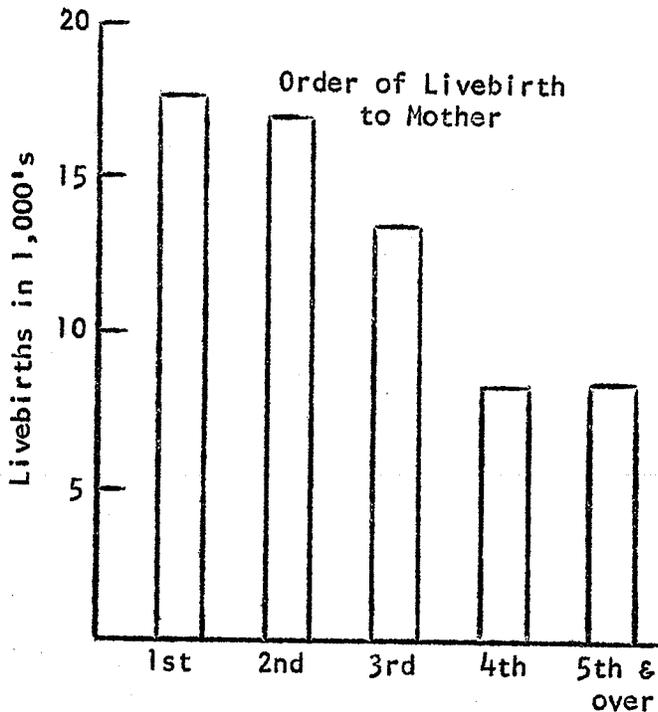

LIVEBIRTHS

The number of livebirths in Washington in 1958 was the second largest in the state's history with 66,016 births occurring in the state and 65,574 births to Washington residents. The resident birth rate for 1958 is 23.7, slightly below the ten year median of 24.3.

Table I lists the number of births from 1915 through 1958 with rates per 1,000 estimated population. These data are presented graphically on page 3. It can be observed in general the trend has been upward although a temporary downward trend prevailed during the period from 1920 through 1933. In 1933, the low rate of 12.9 per 1,000 population prevailed. From this point, a gradual rising trend is observed which continues until the peak is reached in 1947. From 1947 to date, the birth rate seems to have tapered off to a norm of around 24 livebirths per 1,000 estimated population.

Counties showing the highest resident birth rates for 1958 (all those over 30.0 per 1,000 population) were Grant with 31.6 per 1,000, Island with 34.2 per 1,000. Those counties showing the lowest resident birth rates (all those under 18.0 per 1,000 population) were Columbia and Lincoln with 17.5 per 1,000, San Juan with 7.8 per 1,000 and Wahkiakum with 17.4 per 1,000. Residence and occurrence births for 1958 with rates per 1,000 population are given in Table 4 on page 11 of this summary.

Of the total residence livebirths 94.5 per cent were classified as White with 2.3 per cent as Negro, 1.5 per cent as Indian and the balance as Oriental or Other. This is a slight gain in the percentage of non-white livebirths from 3.5% in 1950 to 5.5% in 1958. County data by race are given in Table 5 on page 13.

Of the livebirths by residence 99.2 per cent were born in hospitals or maternity homes. Residence and occurrence data by place, institutions of birth, are given in Table 7 page 17.

The sex ratio of residence livebirths was 106.4 males per every 100 females. In regard to the order of birth, more livebirths were the first child of the family than were the second or third. Of the residence livebirths, 27.2% were the first child in the family, 26.2% the second child and 20.6% the third child born to the family.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures that the financial statements are reliable and can be audited without issue.

In addition, it is crucial to review the records regularly to identify any discrepancies or errors. This proactive approach helps in catching mistakes early and prevents them from escalating into larger problems. The document also mentions the need for clear communication between all parties involved in the financial process.

Furthermore, the document highlights the significance of staying up-to-date with the latest accounting standards and regulations. Compliance is not only a legal requirement but also a key factor in maintaining the trust of stakeholders. Regular training and updates are essential for ensuring that the accounting team is well-equipped to handle any challenges.

The second part of the document focuses on the implementation of effective internal controls. These controls are designed to minimize the risk of fraud and error, thereby protecting the organization's assets. A strong control environment is the foundation of a successful financial reporting system.

It is also important to establish a clear line of responsibility for each task within the accounting department. This helps in ensuring that all duties are performed efficiently and effectively. The document provides several examples of control procedures that can be adapted to various organizational structures.

Finally, the document concludes by reiterating the importance of transparency and accountability in financial management. By following the guidelines outlined in this document, organizations can ensure that their financial operations are conducted in a professional and ethical manner.

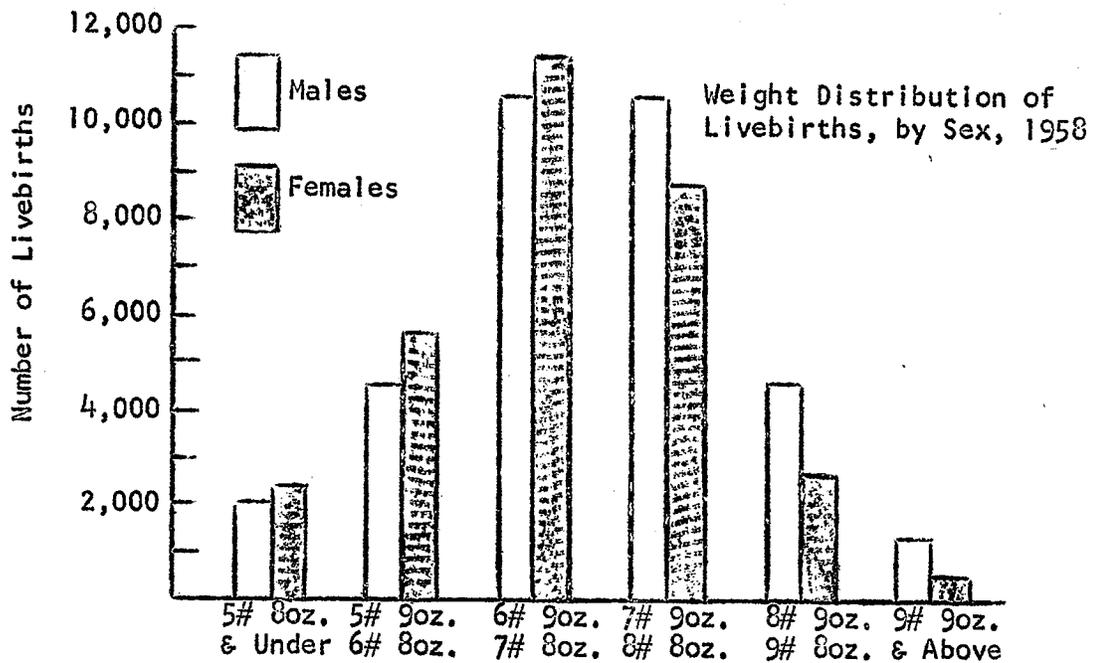

The order of livebirth to mother is illustrated in the graph on the preceding page and is presented in tabulated form in the birth summary table on page 9.

A total of 687 sets of twins were born in 1958. Of these, 667 sets of twins were born in which both were live born and 20 sets with one child listed as a fetal death.

In addition to these, four sets of triplets were born. All infants in this group were live born. The county and city breakdown of multiple births is given in Table 9 page 21. Median age of mothers in 1958 was 25 years of age. The greatest number of births occurred to mothers in the 20-24 age group.

Resident illegitimate livebirths occurred at the rate of 27.9 per 1,000 resident livebirths and of occurrence illegitimate livebirths occurred at the rate of 29.1 per 1,000 occurrence livebirths. Table 9, page 21, contains data on illegitimate livebirths by county and city of residence and of occurrence.

Male infants tended to weigh more at birth than female infants.

Median weight of the males was 7 pounds 8 ounces as compared to 7 pounds 4 ounces for the female livebirths. The above graph shows the weight distribution by sex. Defining immaturity as infants 5 1/2 pounds or less at birth, there were 4,508 immature livebirths or 6.9 per cent of the total number of residence livebirths. Table 9, 10 and 11 on pages 21, 23 and 25 give the data on immaturity by county and city.

Pages 9 through 31 contain other data on livebirths for Washington during the year 1958.

TABLE 3

LIVEBIRTHS: SUMMARY, 1958

A. Livebirths: Residence by Race by Sex B. Livebirths: Residence by Age Group of Mother by Sex

H. Multiple Livebirths

667 sets of Twins, both Liveborn
 20 sets of Twins, One Liveborn, One Stillborn
 4 sets of Triplets, all Liveborn

The first part of the document discusses the importance of maintaining accurate records. It emphasizes that proper documentation is essential for ensuring the integrity and reliability of the data collected. This section also outlines the various methods used to gather information, including direct observation and interviews.

In the second section, the focus shifts to the analysis of the collected data. The author describes how the information was organized and categorized to identify patterns and trends. This process involved a thorough review of all records to ensure that no relevant details were overlooked.

The final part of the document provides a summary of the findings and conclusions drawn from the study. It highlights the key insights gained and offers recommendations for future research. The author notes that while the current study has provided valuable information, there are still several areas that require further investigation.

The results of the study indicate that there is a significant correlation between the variables examined. This finding is supported by the statistical analysis conducted, which shows a strong positive relationship. These results are consistent with previous research in this field, suggesting that the underlying mechanisms are similar.

The data also reveals that certain factors have a more pronounced effect than others. For example, the study found that environmental conditions play a crucial role in the overall outcome. This insight is particularly important as it allows for a more targeted approach to addressing the issues at hand.

Based on the findings, it is recommended that further studies be conducted to explore the long-term effects of the variables. Additionally, the author suggests that more comprehensive data collection methods should be employed to enhance the accuracy of the results.

In conclusion, this study has provided a detailed look into the relationship between the variables. The findings are both informative and actionable, offering a clear path forward for future research and practical applications.

THE UNIVERSITY OF CHICAGO
DEPARTMENT OF CHEMISTRY

1. The first part of the experiment was to determine the molar mass of a polymer. This was done by measuring the osmotic pressure of a solution of the polymer in a solvent. The osmotic pressure was measured at several different concentrations and the data were plotted as $\frac{\pi}{c}$ versus c . The intercept of the line at $c=0$ gives the limiting value of $\frac{\pi}{c}$, which is equal to $\frac{RT}{M}$, where M is the molar mass of the polymer. From this value, the molar mass was calculated to be 1.2×10^5 g/mol.

2. The second part of the experiment was to determine the degree of substitution of a polymer. This was done by measuring the refractive index of a solution of the polymer in a solvent. The refractive index was measured at several different concentrations and the data were plotted as $n_D - n_D^0$ versus c . The intercept of the line at $c=0$ gives the limiting value of $n_D - n_D^0$, which is equal to $\frac{K}{M}$, where K is a constant that depends on the refractive index increment of the polymer. From this value, the degree of substitution was calculated to be 0.45.

3. The third part of the experiment was to determine the molecular weight of a polymer. This was done by measuring the sedimentation velocity of a polymer solution in a centrifuge. The sedimentation velocity was measured at several different concentrations and the data were plotted as s versus c . The intercept of the line at $c=0$ gives the limiting value of s , which is equal to $\frac{M(1 - \nu_2 \rho)}{RT \omega^2}$, where ν_2 is the partial specific volume of the polymer and ρ is the density of the solvent. From this value, the molecular weight was calculated to be 1.5×10^5 g/mol.

4. The fourth part of the experiment was to determine the molecular weight of a polymer. This was done by measuring the sedimentation velocity of a polymer solution in a centrifuge. The sedimentation velocity was measured at several different concentrations and the data were plotted as s versus c . The intercept of the line at $c=0$ gives the limiting value of s , which is equal to $\frac{M(1 - \nu_2 \rho)}{RT \omega^2}$, where ν_2 is the partial specific volume of the polymer and ρ is the density of the solvent. From this value, the molecular weight was calculated to be 1.5×10^5 g/mol.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions.

2. It is essential to ensure that all entries are supported by proper documentation and receipts.

3. Regular audits should be conducted to verify the accuracy of the records and identify any discrepancies.

4. The second part of the document outlines the procedures for handling cash and credit transactions.

5. All cash receipts should be recorded immediately and deposited in the company's bank account.

6. Credit sales should be recorded at the time of sale, and the amount should be added to the accounts receivable.

7. The third part of the document describes the methods for calculating and recording expenses.

8. Expenses should be recorded in the general ledger and classified according to their nature.

9. The fourth part of the document provides information on the preparation of financial statements.

10. The balance sheet, income statement, and statement of cash flows are the primary financial statements.

11. The fifth part of the document discusses the role of the auditor in verifying the accuracy of the financial statements.

12. The auditor should perform a thorough examination of the records and provide an independent opinion on the financial statements.

13. The sixth part of the document concludes with a summary of the key points discussed throughout the document.

14. It is hoped that this document will provide a clear understanding of the accounting process and the importance of accurate record-keeping.

15. The document is intended for use by students and professionals alike who are interested in the field of accounting.

16. The author wishes to express their appreciation to the many individuals and organizations that have supported the project.

17. The document is available for free download and use by anyone who is interested in the subject.

18. The author reserves the right to make changes to the document at any time without notice.

Seattle	12,353	58	98	157	641	2,323	4,890	3,231	842	109	4

The following table shows the results of the experiments conducted on the various specimens of the material under test. The specimens were prepared in accordance with the standard specifications and were tested under the following conditions:

Specimen No.	Material	Temperature (°C)	Strain Rate (mm/min)	Yield Strength (MPa)	Tensile Strength (MPa)	Elongation (%)
1	Aluminum	25	0.5	100	150	10
2	Aluminum	50	0.5	95	145	12
3	Aluminum	75	0.5	90	140	15
4	Aluminum	100	0.5	85	135	18
5	Aluminum	125	0.5	80	130	22
6	Aluminum	150	0.5	75	125	28
7	Aluminum	175	0.5	70	120	35
8	Aluminum	200	0.5	65	115	45
9	Aluminum	225	0.5	60	110	55
10	Aluminum	250	0.5	55	105	70
11	Aluminum	275	0.5	50	100	90
12	Aluminum	300	0.5	45	95	120
13	Aluminum	325	0.5	40	90	160
14	Aluminum	350	0.5	35	85	220
15	Aluminum	375	0.5	30	80	300
16	Aluminum	400	0.5	25	75	400
17	Aluminum	425	0.5	20	70	550
18	Aluminum	450	0.5	15	65	800
19	Aluminum	475	0.5	10	60	1200
20	Aluminum	500	0.5	5	55	1800

The above data indicates that the yield strength and tensile strength of the material decrease as the temperature increases, while the elongation increases. This is characteristic of a ductile material. The data also shows that the material exhibits significant strain rate sensitivity, with the yield strength increasing as the strain rate increases.

1. The first part of the report discusses the current state of the world economy and the impact of the Asian financial crisis on the global economy.

2. The second part of the report discusses the impact of the Asian financial crisis on the global economy and the role of the International Monetary Fund (IMF) in addressing the crisis.

3. The third part of the report discusses the impact of the Asian financial crisis on the global economy and the role of the World Bank in addressing the crisis.

4. The fourth part of the report discusses the impact of the Asian financial crisis on the global economy and the role of the World Trade Organization (WTO) in addressing the crisis.

5. The fifth part of the report discusses the impact of the Asian financial crisis on the global economy and the role of the World Health Organization (WHO) in addressing the crisis.

6. The sixth part of the report discusses the impact of the Asian financial crisis on the global economy and the role of the World Bank in addressing the crisis.

7. The seventh part of the report discusses the impact of the Asian financial crisis on the global economy and the role of the World Bank in addressing the crisis.

8. The eighth part of the report discusses the impact of the Asian financial crisis on the global economy and the role of the World Bank in addressing the crisis.

9. The ninth part of the report discusses the impact of the Asian financial crisis on the global economy and the role of the World Bank in addressing the crisis.

10. The tenth part of the report discusses the impact of the Asian financial crisis on the global economy and the role of the World Bank in addressing the crisis.

11. The eleventh part of the report discusses the impact of the Asian financial crisis on the global economy and the role of the World Bank in addressing the crisis.

12. The twelfth part of the report discusses the impact of the Asian financial crisis on the global economy and the role of the World Bank in addressing the crisis.

13. The thirteenth part of the report discusses the impact of the Asian financial crisis on the global economy and the role of the World Bank in addressing the crisis.

14. The fourteenth part of the report discusses the impact of the Asian financial crisis on the global economy and the role of the World Bank in addressing the crisis.

MORTALITY

General

There were 25,429 deaths of Washington residents in 1958 for a rate of 9.2 per 1,000 estimated population. Deaths occurred in Washington at a rate of 9.3 per 1,000 estimated population for a total number of deaths occurring of 25,624. Columbia County had the highest residence death rate with a rate of 12.4 per 1,000 population. The lowest death rate was shown by Benton County with the rate of 4.4 per 1,000 population.

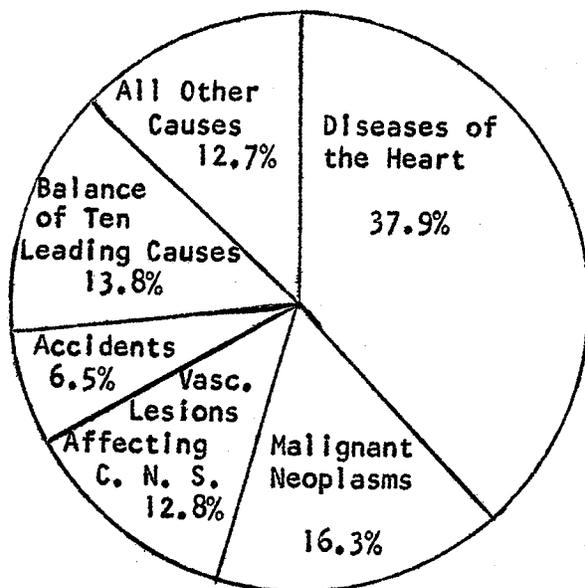

The sex ratio for residence deaths in 1958 was 147.2 male deaths for every 100 female deaths. Of the male deaths 53.2 per cent were married at the time of death and only 17.3 were widowers. Female deaths included 34.9 per cent married women and 47.6 per cent widowed. Median age of males dying was 68 and the median age at death of females was 72. The white race accounted for 96.7 per cent of the total number of deaths.

General mortality data are given in death summary Tables 15, 16 and 17, pages 34 through 40 and Tables 18 through 28 contain more detailed data.

Selected Causes

Table 16, page 36 gives selected causes of death arranged according to the cause of death code as determined by the International Statistical Classification of Causes of Death. The death summary Table also lists

Distribution of 1958 Deaths
by Cause

the 10 leading causes of death according to rank. Diseases of the heart accounted for 37.9 per cent of the total number of deaths of Washington residents in 1958 with a rate of 348.2 per 100,000 population. Diseases of the heart has been the leading cause of death in Washington since 1913 with the exception of pneumonia in 1918.

Tuberculosis was a leading cause of death before 1913, but since 1952 tuberculosis no longer ranked as one of the ten leading causes. Malignant neoplasms and vascular lesions affecting the central nervous system have been the second and third leading causes of death since the early 1920's.

1948

1949

1950

1951

1952

1953

1954

1955

1956

The fourth leading cause "All Accidents" was the leading cause of death at ages 1 through 34. Diseases of early infancy were the leading cause of death at age under 1 year. Table 17, page 38 lists the leading causes of death in each 5 year age group for each sex with a percentage that each comprises of the total in each age group.

Causes of death of special interest, though not necessarily leading causes are given by county and city with rates per 100,000 population in Table 23, pages 51 to 56.

Deaths from infective and parasitic diseases, including tuberculosis, are given in Table 26, page 64.

Accidental deaths by leading causes, and by place of accident are given in Table 24, page 57.

Homicides and Suicides by county and city of residence and occurrence are given in Table 25, page 62.

There were 11 maternal deaths in Washington in 1958. Data on maternal deaths are given in Table 28, pages 67 and 68.

Yakima	532	29	4	3	5	8	18	38	57	152	156	62	

1. The first part of the document discusses the importance of maintaining accurate records of all transactions.

2. It is essential to ensure that all data is entered correctly and consistently across all systems.

3. Regular audits should be conducted to verify the integrity and accuracy of the information stored.

4. The second section focuses on the implementation of robust security measures to protect sensitive data.

5. This includes the use of strong encryption protocols and the implementation of strict access controls.

6. Additionally, it is crucial to provide comprehensive training to all staff members regarding data security.

7. The third part of the document addresses the need for regular data backups and disaster recovery planning.

8. Ensuring that data is backed up frequently and stored in secure, off-site locations is a top priority.

9. A clear and concise disaster recovery plan should be developed and tested regularly.

10. The final section discusses the importance of staying up-to-date with the latest industry trends and technologies.

11. Continuous learning and professional development are key to maintaining a competitive edge in the market.

12. This involves attending conferences, workshops, and staying informed through industry publications.

13. In conclusion, the document emphasizes the need for a holistic approach to data management, encompassing accuracy, security, and continuous improvement.

Seattle	6,390	543	538	556	527	512	517	553	490	496	583	525	550

1. The first part of the document discusses the importance of maintaining accurate records of all transactions.

2. It is essential to ensure that all entries are supported by appropriate documentation and receipts.

3. Regular audits should be conducted to verify the accuracy of the records and identify any discrepancies.

4. The second part of the document outlines the procedures for handling cash and credit transactions.

5. All cash receipts should be recorded immediately and deposited into the company's bank account.

6. Credit sales should be recorded at the time of sale, and the amount should be added to the accounts receivable.

7. The third part of the document describes the methods for calculating and recording depreciation.

8. Depreciation should be calculated using the straight-line method for most assets, unless otherwise specified.

9. The depreciation expense should be recorded as a debit to the depreciation expense account and a credit to the accumulated depreciation account.

10. The fourth part of the document provides information on the treatment of interest income and expense.

11. Interest income should be recorded as a debit to the interest income account and a credit to the interest receivable account.

12. Interest expense should be recorded as a debit to the interest expense account and a credit to the interest payable account.

13. The fifth part of the document discusses the recording of dividends and stock transactions.

14. Dividends should be recorded as a debit to the dividends payable account and a credit to the cash account.

15. The purchase of stock should be recorded as a debit to the stock account and a credit to the cash account.

16. The sale of stock should be recorded as a debit to the cash account and a credit to the stock account.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that this is crucial for ensuring the integrity of the financial statements and for providing a clear audit trail.

2. The second part of the document outlines the various methods used to collect and analyze data. It describes how different types of information are gathered and how they are processed to identify trends and anomalies.

3. The third part of the document focuses on the role of technology in modern data analysis. It discusses how advanced software tools and algorithms have significantly improved the speed and accuracy of data processing.

4. The fourth part of the document addresses the challenges associated with data security and privacy. It highlights the need for robust safeguards to protect sensitive information from unauthorized access and disclosure.

5. The fifth part of the document explores the ethical implications of data analysis. It discusses the potential for bias and discrimination in algorithmic decision-making and the importance of transparency and accountability.

6. The sixth part of the document provides a summary of the key findings and conclusions. It reiterates the importance of a holistic approach to data analysis that considers both technical and human factors.

7. Finally, the document offers recommendations for future research and practice. It suggests areas where further investigation is needed and provides practical advice for organizations looking to optimize their data management processes.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions.

2. It is essential to ensure that all data is entered correctly and that the system is regularly updated.

3. The second section covers the various methods used to collect and analyze data, including surveys and interviews.

4. These methods allow researchers to gather valuable insights into consumer behavior and market trends.

5. The third part of the document focuses on the challenges of data collection and analysis, such as sampling bias and data quality.

6. Addressing these challenges is crucial for ensuring the reliability and validity of the research findings.

7. The fourth section discusses the ethical considerations surrounding data collection and analysis, including informed consent and data privacy.

8. Researchers must adhere to strict ethical guidelines to protect the rights and privacy of their participants.

9. The fifth part of the document explores the future of data collection and analysis, highlighting emerging technologies and methods.

10. As technology continues to advance, researchers will have access to more powerful tools and techniques for data analysis.

11. The sixth section discusses the importance of data visualization in presenting research findings to a wider audience.

12. Effective data visualization can help researchers communicate complex information in a clear and concise manner.

13. The final part of the document provides a summary of the key points discussed and offers recommendations for future research.

14. It is hoped that this document will provide a comprehensive overview of the field and inspire further research and innovation.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions.

2. It is essential to ensure that all data is entered correctly and consistently across all systems.

3. Regular audits should be conducted to verify the integrity and accuracy of the information stored.

4. The second section covers the various methods used to collect and analyze data from different sources.

5. These methods include manual data entry, automated data collection, and the use of specialized software tools.

6. Each method has its own advantages and disadvantages, and the choice depends on the specific requirements of the project.

7. The third part of the document details the process of data cleaning and validation to ensure high quality.

8. This involves identifying and removing errors, duplicates, and incomplete records from the dataset.

9. The final section discusses the importance of data security and the measures taken to protect sensitive information.

10. This includes implementing strong access controls, encryption, and regular security updates to all systems.

11. The document concludes by emphasizing the need for ongoing monitoring and maintenance of the data management system.

12. By following these guidelines, organizations can ensure that their data is accurate, secure, and readily available for analysis.

13. The appendix provides a detailed list of the software tools and resources used throughout the project.

14. This list includes the names of the tools, their versions, and the reasons for their selection.

15. The document is intended to serve as a comprehensive guide for anyone involved in data management and analysis.

* Primarily due to some cause not related to Pregnancy

FETAL DEATHS
(Stillbirths)

For purposes of Washington State vital statistics registration, a fetal death is defined as a delivery after at least twenty weeks of gestation in which the fetus shows no evidence of life. There are indications that a number of fetal deaths within the scope of this definition are not registered.

A total of 764 residence fetal deaths were recorded in 1958 for a ratio of 11.7 fetal deaths for each 1,000 residence livebirths. During 1958, 785 fetal deaths occurred in the State of Washington or a ratio of 11.9 per 1,000 occurrence livebirths. These ratios continue the long term downward trend. (See graph on page 4)

Among the causes of fetal death, placental and cord conditions accounted for 47.8 per cent of all residence fetal deaths. Table 30 on page 72 gives further data on residence fetal death by causes.

There were 104.0 male fetal deaths for each 100 female fetal deaths. Fetal deaths by county and city of residence and by county and city of occurrence with ratio per 1,000 livebirths are given in Tables 31 and 32 on pages 73 and 75.

From Annual Summary 1958

INFANT DEATHS

Infant deaths (deaths of infants under one year of age) accounted for 1,707 or 6.7% of the total number of residence deaths in 1958. As can be seen in the graph on page 4, the infant mortality rate has experienced a downward trend since 1915. The 1958 residence infant death rate of 26.0 per 1,000 livebirths is an exception to this trend, as it is the highest rate since the 1950 rate of 27.4 per 1,000.

Of residence infant deaths in 1958, there was a ratio of 143.6 male deaths for every 100 female deaths. In 1957, this ratio was 145.0 males to every 100 females. This represents a male infant death rate for 1958 of 29.7 deaths per 1,000 male livebirths and a female infant death rate of 22.0 per 1,000 female livebirths.

In 1958, 1,015 or 59.5% of the infant deaths were classified in the grouping "Certain Diseases of Early Infancy". Of this group, immaturity mentioned with some other condition and immaturity unqualified accounted for 761 deaths. Immaturity or some other condition with mention of immaturity accounted for 44.6 per cent of all infant deaths. Congenital malformations accounted for 15.0 per cent of the infant deaths followed by influenza and pneumonia which caused 12.2 percent of the infant deaths (not including pneumonia of the newborn which is included in category "Certain diseases of Early Infancy"). Accidents caused 4.3 per cent of the infant deaths.

Indians again showed the highest infant death rate 81.9 per 1,000 livebirths. The graph below shows infant death rates by race. Table 35, page 82, gives infant deaths by race by county and city of residence.

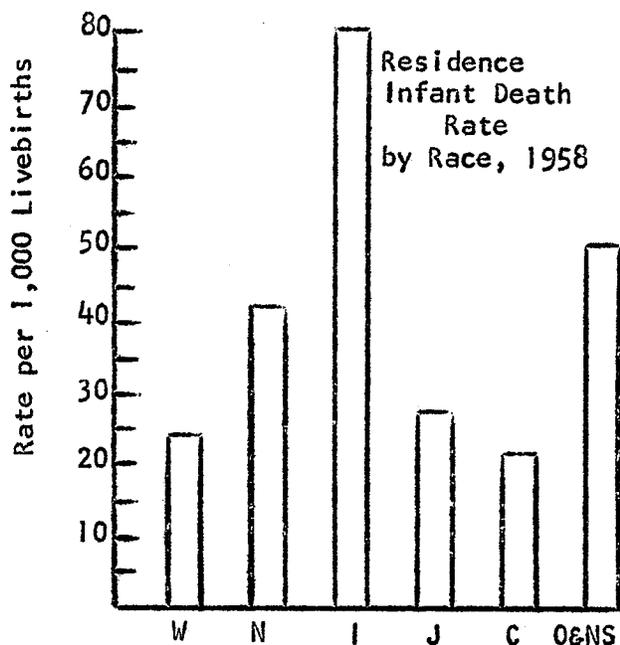

Table 33, page 77, gives a detailed breakdown of infant deaths by cause, sex and age of infant. Table 34, page 80, lists the leading causes for the counties and major cities.

Neonatal Deaths

Neonatal deaths (infants who died before reaching the age of 28 days) accounted for 72.3 of the total resident infant deaths for 1958. Neonatal death data by county and city of residence and by county and city of occurrence are given in Tables 31 and 32, pages 73 and 75.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author details the various methods used to collect and analyze the data. This includes both manual and automated processes. The goal is to ensure that the information gathered is both reliable and comprehensive.

The third section focuses on the results of the analysis. It shows that there is a clear trend in the data, which suggests that the current strategy is effective. However, there are some areas where improvement is needed, particularly in terms of efficiency and cost reduction.

Finally, the document concludes with a series of recommendations for future action. These include implementing new software tools, training staff on best practices, and conducting regular audits to ensure ongoing compliance and accuracy.

*Estimated number of marriages performed is 27,377. (Based upon 33 counties reporting both marriage licenses issued and marriages performed.)

**Estimated number of annulments granted is 119. (Based upon 36 counties reporting divorces granted and annulments granted separately.)

***This figure is an estimate based upon 5,341 divorces and annulments filed in King County and upon 37 counties reporting both divorce actions and annulments filed and divorces and annulments granted.

The data on marriage and divorce were supplied by the county auditors and county clerks of the various counties. Marriage and divorce records are not maintained in the State vital statistics office.

Appendix Table II

TUBERCULOSIS MORBIDITY SUMMARY, 1958

A. Tuberculosis, Newly Reported Cases:
By Sex, by Age Group

Age Group	Total	Male	Female
	1,219	779	440
Under 1	6	3	3
1 - 4	57	27	30
5 - 14	76	44	32
15 - 24	91	42	49
25 - 34	140	85	55
35 - 44	188	129	59
45 - 54	245	162	83
55 - 64	177	130	47
65 & Over	232	153	79
Age Unknown	7	4	3

C. Tuberculosis, Newly Reported Cases:
By Reporting Agency

Total	1,219
<i>DONE '59</i>	
Private Physicians	112
Health Departments	590
Hospitals	280
Tuberculosis Sanatoriums	154
State Mental Institutions	16
Other and Not Stated	67

B. Tuberculosis, Newly Reported Cases:
By Sex, by Race

Race	Total	Male	Female
	1,219	779	440
White	966	637	329
Negro	38	27	11
Indian	182	92	90
Japanese	8	3	5
Chinese	4	1	3
Other	14	14	0
Not Stated	7	5	2

D. Tuberculosis, Newly Reported Cases:
By Degree of Activity of Case

Total	1,219
Active	713
Probably Active	86
Probably Inactive	130
Arrested	5
Inactive	218
Unknown	67

E. Tuberculosis, Newly Reported Cases: By Form, by Extent

Total	1,219
Pulmonary Tuberculosis	1,111
Minimal	470
Moderately Advanced	376
Far Advanced	158
Active Primary	62
Silica Tuberculosis	12
Not classified as to extent	33
Non-Pulmonary Tuberculosis	108

Appendix Table III

TUBERCULOSIS, NEWLY REPORTED CASES: BY SEX, BY RACE, FOR
COUNTIES AND CITIES OF 10,000 POPULATION AND OVER, WITH
RATES PER 100,000 POPULATION, 1958
