Threatened or Concerned status is generally based on marine water quality but may also be based on the presence of potential pollution sources that, if not managed, may cause a downgrade in classification. Threatened status is assigned in SRS growing areas when a water sampling station's 90th percentile is between 30 and 43 fc/100mL. In APC growing areas threatened status is assigned if the percentage of samples that exceed 43 fc/100ml is between 6.6% and 10.0%. Concerned status is assigned where a water sampling station's 90th percentile is greater than 20, but less than 30.
