

SSB 5930 Performance Measures for HIV-related Activity

Time Period: January 1, 2011 through June 30, 2011

Performance Measure 2: Improve the timely, complete identification and standard, effective investigation of notifiable conditions per WAC 246-101.

Reporting Measure 2A. Percent of HIV cases reported to the LHJ within the required time frame (providers must report HIV and AIDS cases to LHJs within three days).

Time from Diagnosis to LHJ Notification	ASOTIN CO.		Washington State	
	N	(%)	N	%
1-3 work days	0	(0%)	38	(15%)
4-5 work days	0	(0%)	24	(9%)
6-10 work days	0	(0%)	63	(24%)
11-20 work days	0	(0%)	66	(25%)
21-40 work days	1	(100%)	39	(15%)
Greater than 40 work days	0	(0%)	29	(11%)
Total	1	(100%)	259	(100%)

Notes. The table above describes new Washington State cases completed January 1, 2011 through June 30, 2011. It does not include cases that were previously reported out of state, or old HIV cases with new progressions to AIDS.

Reporting Measure 2B. Percent of HIV cases reported to the LHJ where the investigation was initiated within three work days.

Time to contact index patient	ASOTIN CO.		Washington State	
	N	(%)	N	(%)
Cases in which the first attempt to contact the index patient occurred within three days of the LHJ being notified of a new HIV infection	1	(100%)	76	(41%)
Number of complete cases in which an attempt to contact the index patient was appropriate	1		185	
Average number of days to first attempt to contact the index patient	1		20	
Number of complete cases in which an attempt to contact the index patient was not appropriate	0		16	
Number of pending cases in which an attempt to contact the index patient is appropriate, but not yet complete	0		58	

Notes. The table above represents new Washington State cases reported January 1, 2011 through June 30, 2011. It does not include cases that were previously reported out of state, or old HIV cases with new progression to AIDS. It also does not include cases for which it was not appropriate to initiate contact with the index patient, such as when an individual was deceased.

SSB 5930 Performance Measures for HIV-related Activity

Time Period: January 1, 2011 through June 30, 2011

Reporting Measure 2C. Percent of notifiable condition cases reported to the LHJ with a completed investigation as indicated by completion of "essential fields".

Essential Field	ASOTIN CO.		Washington State	
	N	(%)	N	%
ACRF for measuring completeness (ACRF)	1		259	
Date of diagnosis	1	(100%)	259	(100%)
LHJ notification date	1	(100%)	259	(100%)
Name	1	(100%)	259	(100%)
Address	1	(100%)	258	(100%)
Race	1	(100%)	250	(97%)
Ethnicity	1	(100%)	242	(93%)
Birth Date	1	(100%)	259	(100%)
Risk	1	(100%)	200	(77%)
Diagnosis Facility	1	(100%)	256	(99%)
Partner Counseling Record (PCR)				
PCR for measuring completeness	1		185	
Attempt to Contact, or it was not appropriate to attempt to contact	1	(100%)	184	(99%)
Index Case Interviewed, or it was not appropriate to interview the index patient	1	(100%)	110	(59%)
Date First Tested	0	(0%)	63	(34%)
All Initiated Partners Closed, or it was not appropriate to initiate partners	1	(100%)	86	(46%)
Age	1	(100%)	136	(74%)
Residence Zip Code	1	(100%)	121	(65%)
Residence County	1	(100%)	136	(74%)
Ethnicity	1	(100%)	122	(66%)
Race	1	(100%)	129	(70%)
Risk	0	(0%)	121	(65%)
Number of complete cases in which an attempt to contact the index patient was not appropriate	0		16	
Number of cases for measuring total completeness (Total completeness means all ACRF elements are complete PLUS all PCR elements are complete or the case was not appropriate for Partner Services)	1		185	
Total Complete	0		26	
Number of pending cases in which an attempt to contact the index patient is appropriate, but not yet complete	0		58	

Notes. The ACRF portion of the table above describes new Washington State cases completed January 1, 2011 through June 30, 2011. The PCR portion of the table, including Total Completeness, describes new Washington State cases reported January 1, 2011 through June 30, 2011. It does not include cases that are pending completion of Partner Services work. It does not include cases that were previously reported out of state, or old HIV cases with new progression to AIDS. It also does not include cases for which it was not appropriate to initiate contact with the index patient, such as when an individual was deceased.

Number of complete cases in which an attempt to contact the index patient was not appropriate	0		16	
Number of cases for measuring total completeness (Total completeness means all ACRF elements are complete PLUS all PCR elements are complete or the case was not appropriate for Partner Services)	3		185	
Total Complete	0		26	
	(0%)		(14%)	
Number of pending cases in which an attempt to contact the index patient is appropriate, but not yet complete	0		58	

Notes. The ACRF portion of the table above describes new Washington State cases completed January 1, 2011 through June 30, 2011. The PCR portion of the table, including Total Completeness, describes new Washington State cases reported January 1, 2011 through June 30, 2011. It does not include cases that are pending completion of Partner Services work. It does not include cases that were previously reported out of state, or old HIV cases with new progression to AIDS. It also does not include cases for which it was not appropriate to initiate contact with the index patient, such as when an individual was deceased.

SSB 5930 Performance Measures for HIV-related Activity

Time Period: January 1, 2011 through June 30, 2011

Performance Measure 2: Improve the timely, complete identification and standard, effective investigation of notifiable conditions per WAC 246-101.

Reporting Measure 2A. Percent of HIV cases reported to the LHJ within the required time frame (providers must report HIV and AIDS cases to LHJs within three days).

Time from Diagnosis to LHJ Notification	GRANT CO.		Washington State	
			N	%
1-3 work days	0	(0%)	38	(15%)
4-5 work days	0	(0%)	24	(9%)

SSB 5930 Performance Measures for HIV-related Activity

Time Period: January 1, 2011 through June 30, 2011

Performance Measure 2: Improve the timely, complete identification and standard, effective investigation of notifiable conditions per WAC 246-101.

Reporting Measure 2A. Percent of HIV cases reported to the LHJ within the required time frame (providers must report HIV and AIDS cases to LHJs within three days).

Time from Diagnosis to LHJ Notification	LEWIS CO.		Washington State	
	N	%	N	%
1-3 work days	0	(0%)	38	(15%)
4-5 work days	0	(0%)	24	(9%)
6-10 work days	1	(50%)	63	(24%)
11-20 work days	0	(0%)	66	(25%)
21-40 work days	1	(50%)	39	(15%)
Greater than 40 work days	0	(0%)	29	(11%)
Total	2	(100%)	259	(100%)

Notes. The table above describes new Washington State cases completed January 1, 2011 through June 30, 2011. It does not include cases that were previously reported out of state, or old HIV cases with new progressions to AIDS.

Reporting Measure 2B. Percent of HIV cases reported to the LHJ where the investigation was initiated within three work days.

Time to contact index patient	LEWIS CO.		Washington State	
	N	(%)	N	(%)
Cases in which the first attempt to contact the index patient occurred within three days of the LHJ being notified of a new HIV infection	0	(0%)	76	(41%)
Number of complete cases in which an attempt to contact the index patient was appropriate	2		185	
Average number of days to first attempt to contact the index patient	31		20	
Number of complete cases in which an attempt to contact the index patient was not appropriate	0		16	
Number of pending cases in which an attempt to contact the index patient is appropriate, but not yet complete	0		58	

Notes. The table above represents new Washington State cases reported January 1, 2011 through June 30, 2011. It does not include cases that were previously reported out of state, or old HIV cases with new progression to AIDS. It also does not include cases for which it was not appropriate to initiate contact with the index patient, such as when an individual was deceased.

SSB 5930 Performance Measures for HIV-related Activity

Time Period: January 1, 2011 through June 30, 2011

Reporting Measure 2C. Percent of notifiable condition cases reported to the LHJ with a completed investigation as indicated by completion of "essential fields".

Essential Field	LEWIS CO.		Washington State	
	N	%	N	%
ACRF for measuring completeness (ACRF)	2		259	
Date of diagnosis	2	(100%)	259	(100%)
LHJ notification date	2	(100%)	259	(100%)
Name	2	(100%)	259	(100%)
Address	2	(100%)	258	(100%)
Race	1	(50%)	250	(97%)
Ethnicity	1	(50%)	242	(93%)
Birth Date	2	(100%)	259	(100%)
Risk	2	(100%)	200	(77%)
Diagnosis Facility	2	(100%)	256	(99%)
Partner Counseling Record (PCR)				
PCR for measuring completeness	2		185	
Attempt to Contact, or it was not appropriate to attempt to contact	2	(100%)	184	(99%)
Index Case Interviewed, or it was not appropriate to interview the index patient	0	(0%)	110	(59%)
Date First Tested	0	(0%)	63	(34%)
All Initiated Partners Closed, or it was not appropriate to initiate partners	0	(0%)	86	(46%)
Age	0	(0%)	136	(74%)
Residence Zip Code	0	(0%)	121	(65%)
Residence County	0	(0%)	136	(74%)
Ethnicity	0	(0%)	122	(66%)
Race	0	(0%)	129	(70%)
Risk	0	(0%)	121	(65%)
Number of complete cases in which an attempt to contact the index patient was not appropriate	0		16	
Number of cases for measuring total completeness (Total completeness means all ACRF elements are complete PLUS all PCR elements are complete or the case was not appropriate for Partner Services)	2		185	
Total Complete	0	NA	26	(14%)
Number of pending cases in which an attempt to contact the index patient is appropriate, but not yet complete	0		58	

Notes. The ACRF portion of the table above describes new Washington State cases completed January 1, 2011 through June 30, 2011. The PCR portion of the table, including Total Completeness, describes new Washington State cases reported January 1, 2011 through June 30, 2011. It does not include cases that are pending completion of Partner Services work. It does not include cases that were previously reported out of state, or old HIV cases with new progression to AIDS. It also does not include cases for which it was not appropriate to initiate contact with the index patient, such as when an individual was deceased.

Ethnicity	20	(83%)	242	(93%)
Birth Date	24	(100%)	259	(100%)
Risk	18	(75%)	200	(77%)
Diagnosis Facility	24	(100%)	256	(99%)
Partner Counseling Record (PCR)				
PCR for measuring completeness	24		185	
Attempt to Contact, or it was not appropriate to attempt to contact	24	(100%)	184	(99%)
Index Case Interviewed, or it was not appropriate to interview the index patient	7	(29%)	110	(59%)
Date First Tested	0	(0%)	63	(34%)
All Initiated Partners Closed, or it was not appropriate to initiate partners	5	(21%)	86	(46%)
Age	13	(54%)	136	(74%)
Residence Zip Code	12	(50%)	121	(65%)
Residence County	13	(54%)	136	(74%)
Ethnicity	10	(42%)	122	(66%)
Race	10	(42%)	129	(70%)
Risk	13	(54%)	121	(65%)
Number of complete cases in which an attempt to contact the index patient was not appropriate	0		16	
Number of cases for measuring total completeness (Total completeness means all ACRF elements are complete PLUS all PCR elements are complete or the case was not appropriate for Partner Services)	24		185	
Total Complete	0	(0%)	26	(14%)
Number of pending cases in which an attempt to contact the index patient is appropriate, but not yet complete	0		58	

Notes. The ACRF portion of the table above describes new Washington State cases completed January 1, 2011 through June 30, 2011. The PCR portion of the table, including Total Completeness, describes new Washington State cases reported January 1, 2011 through June 30, 2011. It does not include cases that are pending completion of Partner Services work. It does not include cases that were previously reported out of state, or old HIV cases with new progression to AIDS. It also does not include cases for which it was not appropriate to initiate contact with the index patient, such as when an individual was deceased.

SSB 5930 Performance Measures for HIV-related Activity

Time Period: January 1, 2011 through June 30, 2011

Performance Measure 2: Improve the timely, complete identification and standard, effective investigation of notifiable conditions per WAC 246-101.

Reporting Measure 2A. Percent of HIV cases reported to the LHJ within the required time frame (providers must report HIV and AIDS cases to LHJs within three days).

Time from Diagnosis to LHJ Notification	SPOKANE CO.		Washington State	
	N	%	N	%
1-3 work days	5	(33%)	38	(15%)
4-5 work days	1	(7%)	24	(9%)
6-10 work days	2	(13%)	63	(24%)
11-20 work days	4	(27%)	66	(25%)
21-40 work days	3	(20%)	39	(15%)
Greater than 40 work days	0	(0%)	29	(11%)
Total	15	(100%)	259	(100%)

Notes. The table above describes new Washington State cases completed January 1, 2011 through June 30, 2011. It does not include cases that were previously reported out of state, or old HIV cases with new progressions to AIDS.

Reporting Measure 2B. Percent of HIV cases reported to the LHJ where the investigation was initiated within three work days.

Time to contact index patient	SPOKANE CO.		Washington State	
	N	(%)	N	(%)
Cases in which the first attempt to contact the index patient occurred within three days of the LHJ being notified of a new HIV infection	5	(33%)	76	(41%)
Number of complete cases in which an attempt to contact the index patient was appropriate	15		185	
Average number of days to first attempt to contact the index patient	31		20	
Number of complete cases in which an attempt to contact the index patient was not appropriate	0		16	
Number of pending cases in which an attempt to contact the index patient is appropriate, but not yet complete	0		58	

Notes. The table above represents new Washington State cases reported January 1, 2011 through June 30, 2011. It does not include cases that were previously reported out of state, or old HIV cases with new progression to AIDS. It also does not include cases for which it was not appropriate to initiate contact with the index patient, such as when an individual was deceased.

SSB 5930 Performance Measures for HIV-related Activity
