Purpose

The Commission issues these guidelines to ensure that surgeons who perform overlapping or simultaneous elective surgeries do so in a patient-centered and transparent manner.

Definitions

Simultaneous surgery occurs when one surgeon, with the help of assistants, performs two surgeries on two different patients in different operating rooms at the same time.

Overlapping surgery occurs in two circumstances. The first is when the key or critical elements of the first operation have been completed and there is no reasonable expectation that there will be a need for the primary attending surgeon to return to that operation. A second operation is started in another operating room while a qualified practitioner performs non-critical components of the first operation allowing the primary surgeon to begin the second operation. The second circumstance is when the key or critical elements of the first operation have been completed and the primary attending surgeon is performing key or critical portions in another room. The primary attending physician must assign immediate availability in the first operating room to another attending surgeon.

Guidelines

A. General principles

1. The primary attending surgeon's sole focus must be to provide the best care to the patient.
2. The primary attending surgeon is personally responsible for the patient's safety and welfare throughout the surgery.
3. The primary attending surgeon should participate in the surgical huddle or time out before the first incision is made.
4. In general, the primary attending surgeon should be in the operating suite or be immediately available for the entire surgical procedure. If the primary attending surgeon is

not present or immediately available, another attending surgeon should be assigned as immediately available.

B. Informed Consent

The primary attending surgeon must inform the patient of the circumstances of the overlapping or simultaneous surgery, including:

1. Who will participate in the surgery, including residents, fellows, physician assistants and nurse practitioners who are directly supervised by the surgeon;
2. When the primary attending surgeon will be absent for part of the surgery; and
3. Who will continue the surgery when the primary attending surgeon leaves the operating room.

The primary attending surgeon should provide this information well in advance of the surgery, providing the patient adequate time to consider the information, ask questions, and then to consent to the event as described or to find another surgeon.

C. Documentation

The primary attending surgeon should document in the surgical record the following information:

1. The absence of the primary attending surgeon for any part of the surgery;
2. The time the primary attending surgeon enters and leaves the operating suite; and
3. The name of the temporary primary operator in the primary attending surgeon's absence.
