Annual Growing Area Review

PREPARED BY: Kelly Curtis
AREA: Lemolo
YEAR ENDING: December 31, 2015
CLASSIFICATION: Approved, Unclassified

Activities In The Growing Area in 2015

Samples were collected six times from the growing area during the year using the Systematic Random Sampling method.

Analytical Results Of Water Samples

Table 1 summarizes the results for 30 of the most recent samples collected from each of the sampling stations. This summary shows that all stations in the area pass the NSSP water quality standard.

Change In Pollution Sources That Impact The Growing Area

We currently have no information indicating that the area has new sources of pollution.

Classification Status

- Well within the classification standards
- Meets standards, but some concerns
- Meets standards, but threatened with downgrade in classification
- Fails to meet current classification standards

Remarks and Recommendations

Table 1 shows that all stations meet the NSSP water quality standards for an Approved classification and the area is correctly classified.

The standard for approved shellfish growing waters is fecal coliform geometric mean not greater than 14 organisms / 100 mL with an estimated 90th percentile not greater than 43 organisms / 100 mL. The above table shows bacteriological results in relation to program standards.
