Statewide Results

Grade 8

Introduction and Overview

This report presents results from the fall 2012 Healthy Youth Survey in Washington State. This survey was sponsored by the Department of Health, the Office of Superintendent of Public Instruction, the Department of Social and Health Services, the Department of Commerce, the Family Policy Council and the Liquor Control Board in cooperation with schools throughout the state of Washington.

For each survey question, results for your students appear in the first column and statewide results appear in the second column. Survey questions covering the same topics are grouped together when possible but be sure to consult the index for related questions when you are searching for information on a specific topic. The numbering in this report is not the same as the question order on the survey itself.

The bulleted points and graphs included at the beginning of this report highlight selected findings. Additional information may be found in the *Interpretive Guide* posted to the Healthy Youth Survey web site: www.AskHYS.net/Reports

Survey Participation

Number of students surveyed:	10,623
Number of valid responses:	10,202
Estimate of enrolled students*:	12,937
Survey participation rate**:	79%

* The estimate of enrolled students is based on figures from the 2012-2013 school year, provided by OSPI.

** The survey participation rate is the number of valid responses divided by the number of enrolled students.

Caution about Participation Rates and Bias

Please use the following guidance when reviewing your results:

- 70% or greater participation—Results are probably representative of students in this grade.
- 40–69% participation—Results may be representative of students in this grade.
- Less than 40% participation—Results are likely not representative of students in this grade but do reflect students who completed the survey.

There may be limitations to your results even if you have a high participation rate. For instance, a particular group of students (say, the school orchestra) may have been away from school the day of the survey, and that could bias the results. It is important to acknowledge the potential limitations when using the results in this report. For reports summarizing results at the county or School District level, you should also consider whether the schools that participated represent all students in that area.

Small Numbers: Caution about Number of Students Participating

Results based on small numbers of students answering a question are unstable---that is, they could easily change with the absence from school of only a couple of students. This is especially the case for when only a few students choose a particular answer option. Also, in this situation, the reported 95% confidence interval might be too narrow. Thus, use caution if fewer than 30 students answered a question and fewer than 5 students selected a given response option.

For example, if 20 students answered a question and of those 20 only 3 students answered "Yes", the estimate is unreliable.

See page 6 for a discussion of the "confidence intervals" used in this report to help guide your interpretation of the results.

Key to the Notes

Four versions of the survey were used in the administration of the 2012 HYS. Forms A and B (or alternate Form NS – identical to Form B except without four sexual behavior questions) were given to secondary students (grades 8, 10 and 12). Form C was given to elementary students (grade 6). Some questions on the Forms were optional at the discretion of the school.

A list of the topics asked and their location in the report are provided in the Questions by Topic section on page 56. The Questions by Form Type section on page 57 provides a list of which Form each question was on.

The following notes are used throughout this report to document the differences between the questions on different versions and indicate the optional questions:

A = wording on Form A; B = wording on Form B; C = wording on Form C

† = optional (on tear-off portion of the survey form)

†† = optional (asked on the secondary Form B, but not on Form NS)

Highlights of the Local Results

Your students and students statewide reported the following behaviors and attitudes:

Substance Use	Statewide % (±CI)	
Smoked cigarettes in past 30 days	5.1%	(±0.7)
Drank alcohol in past 30 days	11.9%	(±1.2)
Used marijuana or hashish in past 30 days	9.4%	(±1.0)
Binge drinking in past 2 weeks	7.1%	(±0.8)

Bullying and School Climate	Statewide % (±CI)	
Carried a weapon at school in the past 30 days	4.2%	(±0.5)
Bullied in the past 30 days	30.7%	(±1.5)
Enjoyed being at school over the past year	49.4%	(±1.6)
Felt safe at school	83.8%	(±1.7)

For more information on specific HYS topics, see the Fact Sheets at www.AskHYS.net, under HYS Results – Fact Sheets

Selected Results by Gender

Selected survey questions are presented by gender to highlight any differences between females and males.

The p-values reported after each question, calculated from a chi-square test, can be used to examine whether differences between females and males are statistically significant.

A p-value of less than 0.05 means there is a significant difference between females and males (that is, if there really is no difference between females and males, the probability of observing a difference at least this large is less than 5%).

To ensure student anonymity, we do not report results by gender for any question unless a minimum of students answer each response option. These results are “suppressed”.

For your student results by gender, a minimum of 10 students need to answer each response option:

For example, to report smoking cigarettes in the past 30 days for your students by gender – surveys are needed for at least 10 females who smoke, 10 females who don't smoke, 10 males who smoke, and 10 males who don't smoke.

For state results by gender, a minimum of 5 students need to answer each response option.

Results that are suppressed are marked with asterisks “***”. Many smaller counties, districts and schools may not have enough students to report results by gender for all or some questions.

Understanding Your Report

N's

In this report "n" is shorthand for "number"---the number of students who took this survey or who answered a survey question. N's are important! We also report the point estimates (%), and the 95% confidence intervals (CI).

Here is an example of how results are displayed in the report tables and charts.

How many students took this survey?

Look on page 2, under Survey Participation. The "number of students surveyed" is the number of surveys that we received. We have careful procedures for "cleaning" to remove surveys with many inconsistent or false answers – the "clean" surveys are the "number of valid surveys". Only valid surveys are presented in this report.

How many students answered each survey question?

The n's for each question vary. Why? There are several reasons:

- There are three versions of the grades 8, 10 and 12 survey---A, B and NS. Core questions are on all versions, so the n's for those questions are about the same as the number of valid surveys. For non-Core questions the n's will be about half, or less
- All versions of the survey have an optional "tear-off" page. Schools that chose to remove the optional page will have no responses for those questions.
- Some schools chose a version of the survey that did not include questions about sexual behaviors (Form NS). [District and county reports may include some schools that DID have those questions and some that DID NOT.]
- Not all students finish the survey, so questions near the end have smaller n's. [NOTE: the order of the questions in the report is not the same as on the survey itself.] Also, some students may decide to skip certain questions.

Here are examples from a district with 400 valid surveys --- notice how the n's change with each question type.

13. Have you ever, even once in your life: Smoked Marijuana?	(n=398)	(n=3,975)	N for a core question (almost all students)
a. Yes	49.0% (±3.0)	46.0% (±1.0)	
b. No	51.0% (±3.0)	54.0% (±1.0)	
14. Have you ever, even once in your life: Used inhalants (things you sniff to get high)?	(n=200)	(n=2,000)	N for a question on only one version (about half the students)
a. Yes	11.0% (±4.0)	12.0% (±2.0)	
b. No	89.0% (±4.0)	88.0% (±2.0)	
166. My parents ask if I've gotten my homework done. †	(n=180)	(n=3,200)	N for an optional tear-off question (about half, or less if some schools removed the questions)
a. NO!	10.0% (±5.0)	8.0% (±2.0)	
b. no	17.0% (±5.0)	17.0% (±2.0)	
c. yes	40.0% (±5.0)	43.0% (±2.0)	
d. YES!	33.0% (±5.0)	32.0% (±2.0)	
93. Have you ever had sexual intercourse? ††	(n=100)	(n=1,600)	N for an optional sexual behavior question (about half, or less if some schools requested surveys without the questions)
a. Yes	60.0% (±6.0)	53.0% (±3.0)	
b. No	40.0% (±6.0)	47.0% (±3.0)	
45. Does anyone who lives with you now smoke cigarettes?	(n=375)	(n=3,750)	N for a core question near the end of the survey (almost all, except students who don't finish the survey)
a. Yes	66.0% (±3.0)	71.0% (±1.0)	
b. No	34.0% (±3.0)	29.0% (±1.0)	

How many students are we talking about?

N's are only provided for the total number of students who answered a question, not the individual answer options. Some people find it useful to translate their point estimates (%) into the number of students.

For example, in a district if 10.0% of students reported that "Yes" they used inhalants in their lifetime and 200 students answered the question, then 20 students in the district used inhalants (20×0.10).

Confidence Intervals

It is unlikely that the point estimate (%) reported for each question is *exactly* the same as the "true" value for all your students. This report includes 95% confidence intervals (CI) to describe this uncertainty. If there is not bias in the data, then there is a 95% chance that the CI will include the true value. So for example, if the point estimate and CI are 51.5% ($\pm 1.5\%$), then there is a 95% chance that the true percentage is between 50.0% and 53.0%.

The size of your CIs depend in part on the n for each question – if more students answer a question; then the closer your point estimate is likely to be to the "true" value. If you are a small school, district or county your CIs will be large. The confidence interval does not take into account the participation rate – in other words, a low participation rate can create bias which will not be reflected in the CI.

How can you "use" confidence intervals?

CIs help you to decide if the differences between your students and the state are statistically significant.

For an example, let's say your students report 25% $\pm 5\%$. That means that the CI is between 20% and 30%. Here is the math: $25\% - 5\% = 20\%$, and $25\% + 5\% = 30\%$

Using CIs, you can decide if the difference between your students and the state results are statistically significant:

1. A significant difference:

- Your students report 25% $\pm 5\%$, so the point estimate is 25% and the CI is 20% to 30%
- Students statewide report 36% $\pm 3\%$, so the point estimate is 36% and the CI is 33% to 39%
- The CIs don't overlap, so the difference is significant

2. Not a significant difference:

- Your students report 25% $\pm 5\%$, so the point estimate is 25% and the CI is 20% to 30%
- Statewide students report 28% $\pm 3\%$, so the point estimate is 28% and the CI is 25% to 31%
- The CI for your students overlaps the point estimate for students statewide, so the difference is not significant

3. Not sure if there is a difference:

- Your students report 25% $\pm 5\%$, so the point estimate is 25% and the CI is 20% to 30%
- Statewide students report 32% $\pm 3\%$, so the point estimate is 32% and the CI is 29% to 35%
- The CIs overlap, but don't include the other point estimates, so you don't know for sure if they are really different without using the significance testing tool described in the next paragraph.

More information about interpreting CIs is available on the HYS Training web page at www.AskHYS.net/Training. The Training web page includes past HYS trainings materials and a "Tool for Determining HYS Statistical Significance". Use the "tool" to find out if your results are significantly different.

More Information

Much of the information on the Healthy Youth Survey is available online at www.AskHYS.net.

- Under HYS Results, you can find these "Frequency Reports". Also included is the 2012 Interpretive Guide with a detailed overview of the reports, information on statistical issues and how to use your data. There are also topical fact sheets and a data query system where you can run your own simple analysis.

Alcohol, Tobacco and Other Drug Use

Alcohol, tobacco, and other drug use has been a major concern in this country for many years. The consequences of ATOD use are well known. In the short term, ATOD use interferes with positive physical, emotional, and social development. In the long term, ATOD use is associated with delinquency and criminal activity, unintended injuries, and a variety of health complications including shorter life expectancy. Tobacco use is the world's leading cause of preventable death, disease, and disability. This section provides information about lifetime ATOD use (which in part reflects experimental use), use in the past 30 days (i.e., current use), and other tobacco-, alcohol-, and drug-related issues.

Lifetime Use

Have you ever, even once in your life:

10. Smoked a cigarette, even just a puff? (Computed from question 207)		
	(n=4,776)	
a. No	85.3%	(\pm 2.0)
b. Yes	14.7%	(\pm 2.0)
11. Smoked a whole cigarette? (Computed from question 37)		
	(n=4,504)	
a. No	89.8%	(\pm 1.4)
b. Yes	10.2%	(\pm 1.4)

	Statewide % (±CI) (n=9,782)
12. Drank more than a sip or two of beer, wine, or hard liquor (for example: vodka, whiskey, or gin)? (Computed from question 208 or 209)	
a. No	64.6% (±1.8)
b. Yes	35.4% (±1.8)
13. Smoked marijuana? (Computed from question 206)	(n=9,793)
a. No	86.3% (±1.5)
b. Yes	13.7% (±1.5)
14. Used inhalants (things you sniff to get high)?	(n=4,734)
a. No	93.9% (±1.0)
b. Yes	6.1% (±1.0)
15. Used heroin?	(n=4,746)
a. No	97.0% (±0.6)
b. Yes	3.0% (±0.6)
16. Used methamphetamines (meth, crystal meth, ice, crank)? Do not include other types of amphetamines.	(n=4,735)
a. No	96.7% (±0.8)
b. Yes	3.3% (±0.8)
17. Used cocaine?	(n=4,736)
a. No	96.2% (±0.8)
b. Yes	3.8% (±0.8)
18. Used steroids (muscle builders) without a doctor's prescription?	(n=4,728)
a. No	97.0% (±0.7)
b. Yes	3.0% (±0.7)

[Question 19 appears only on the elementary version of the survey.]

30-Day Use (Use in the Past 30 Days)

During the past 30 days, on how many days did you:

	(n=10,013)
20. Smoke cigarettes?	
a. None	94.9% (±0.7)

Other Health Concerns

Nutrition and Fitness

This section provides results regarding other health concerns including nutrition and fitness, health conditions and health care, safety, behaviors related to intentional injury, depression, and gambling behavior. Proper nutrition and exercise are critical components of a healthy life, as is access to preventive health care. Safety-related behaviors, such as wearing a seat belt when in a moving vehicle, can profoundly influence the outcome of an accident. Injury is the leading cause of death for adolescents aged 10 to 19, and violence contributes to injury-related deaths. People who are depressed experience a range of symptoms, and depression is associated with suicidal behavior.

Obese: "Obese" includes students who are in the top 5% for body mass index by age and gender based on growth charts developed by the Centers for Disease Control and Prevention (2000). "Overweight" includes students who are in the top 15% but not the top 5%.

Risk and Protective Factors

Decades of research have shown that certain risk factors are associated with increased likelihood of health risk behaviors including ATOD use, violence, and delinquent behaviors. Similarly, research from Drs. Hawkins and Catalano and associates at the University of Washington, has shown that protective factors exert a positive influence against the negative influence of risk factors. The premise of the risk reduction and protective factor enhancement approach to prevention is that preventing a problem before it occurs requires addressing the factors that predict the problem. Ideally, this strategy entails discovering the causes of the problem behavior and influencing those causes. Many of the survey questions were used to assess students' status on risk and protective factors in the community, school, and peer-individual domains. Composite scales were computed for use in local program planning.

Risk and Protective Factor Framework and Reporting Schedule

Risk and Protective Factor Scale Results and Graphs

For each risk factor scale, the percentage of students who are at risk (i.e., who agreed with statements that predict ATOD use or other problem behaviors) is reported; higher percentages indicate that more students are likely to engage in problem behaviors. For each protective factor scale, the percentage of students who are resilient (i.e., who agreed with statements that predict the ability to resist ATOD use or other problem behaviors) is reported; higher percentages indicate that fewer students are likely to engage in problem behaviors. These percentages are based on computational methods provided by the University of Washington’s Social Development Research Group.
