

Benefits of using the School Module

The School Module is a part of the WA State Immunization Information System (IIS). It contains standardized, reliable, and easy-to-read immunization records. School staff can use tools in the Module to track each student's vaccinations and follow-up with parents to ensure compliance with school immunization requirements. The School Module is also regularly updated with new features towards the goal of a comprehensive system for schools to track their student's immunization records.

Specific features of School Module that benefit schools:

- Access to a comprehensive statewide registry that contains millions of immunization records
- Link existing students with school rosters
- View any student's vaccinations, thus reducing the need to enter most immunizations for incoming students
- Print a completed Certificate of Immunization Status for any student
- Determine what immunizations are needed using an accurate forecasting tool
- Run reports showing students who are out of compliance due to missing or incomplete immunizations
- Generate personalized letters and mailing labels to remind parents about missing immunizations
- Update missing immunizations using healthcare provider-verified records
