

ONEHEALTHPORT HIE

ONE STOP FOR HEALTH INFORMATION EXCHANGE

WHO'S WHO

- **OneHealthPort** manages and leads the implementation of the state wide HIE.
- **Foundation for Health Care Quality** oversees the work of OneHealthPort in pricing and security, privacy and access policies
- **Washington State Health Care Authority** is the recipient of ARRA funding, and coordinates state agency HIE work.

Private sector leadership.

Community oversight.

Public sector coordination.

Imagine health care having the same low cost, ubiquitous, easy-to-access electronic information exchange you take for granted in financial services, travel, smart-phones and so many other areas. That's the promise of Health Information Exchange (HIE). The first step toward this vision for Washington state is underway now, with the OneHealthPort HIE.

With Federal funding, OneHealthPort and the Health Care Authority have partnered to deploy Washington's statewide HIE, now available to health organizations in Washington state at reduced "early adopter" rates.

WHY CONNECT TO THE ONEHEALTHPORT HIE?

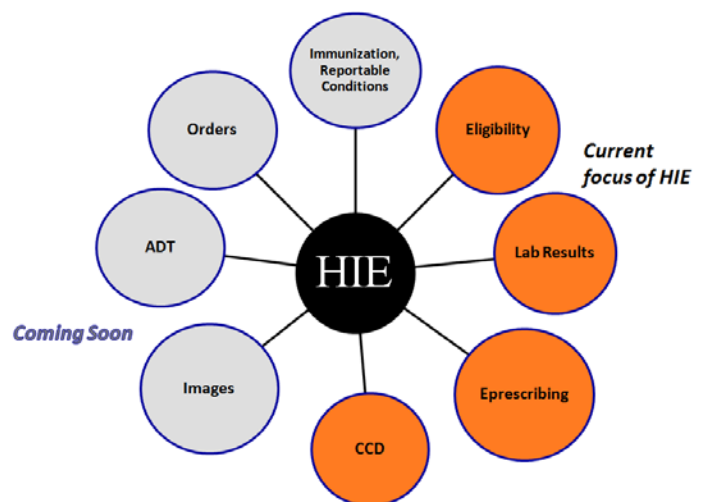

The HIE allows you to connect your business and clinical information systems **once** to a single central hub, and seamlessly exchange data with all your trading partners that are also connected.

The HIE can help your organization:

- Get business and clinical information to and from key trading partners like health plans, your referral network and public agencies in a less costly, complex, and risky way than other solutions
- Qualify for the Meaningful Use incentive payments, which requires electronic exchange of health information
- Work with Accountable Care Organizations, which involves sharing data to better coordinate patient care and improve outcomes

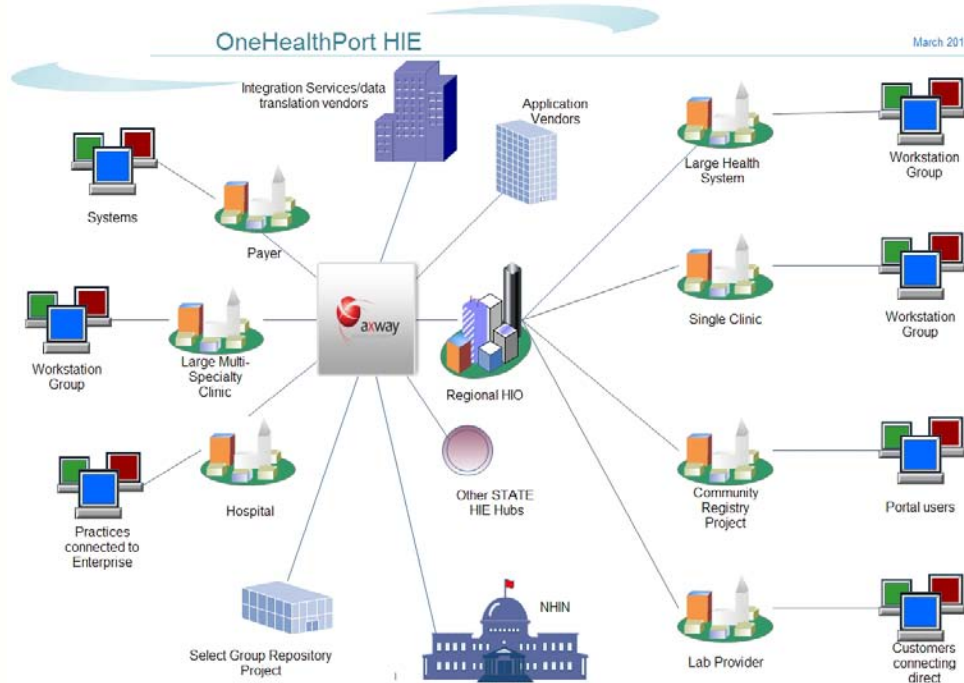

WHAT DATA CAN BE EXCHANGED?

In the long term, trading partners will be able to use the HIE for all their data exchange needs. In the short term, the HIE will prioritize exchange of four high value data sets. These initial data sets (lab results, e-prescribing, the Continuity of Care Document or CCD and eligibility request and response) support the Meaningful Use program, and also meet critical business and clinical needs in the marketplace.

HOW DOES THE ONEHEALTHPORT HIE WORK?

The OneHealthPort HIE is powered by Axway technology, which lies at the heart of many successful information exchanges in health care and in the larger marketplace. Axway's state-of-the-art engine allows you to connect your business and clinical information systems *once* to a central hub, map your data to the community standard and seamlessly exchange data with all your trading partners that are also connected to the hub. Most trading partners will connect directly to the HIE hub. Local HIEs can also connect to the hub allowing their trading partners to enjoy the same benefits.

HOW MUCH DOES THE HIE COST?

- Set Up Fee**—A one-time software license will be charged to connect your system to the HIE hub. For early adopters *this fee is waived* thanks to subsidies from ARRA.
- Mapping Costs**—Each trading partner will map their data to the community standard transaction. This cost will likely range from \$500 to \$5,000 for the most complex cases.
- Annual Subscription**—The annual subscription fee includes unlimited usage with no additional transaction fees.

Organization Level	Organization Description – SAMPLE Metrics	2011 Annual Subscription
Entry	Smallest orgs: revenue <\$10M, 1-9 practitioners	\$600
Small	Revenue \$10M - \$100M, 10-50 practitioners, <50 beds	\$6,000
Mid-size	Revenue \$100M - \$500M, 50+ practitioners, 50 – 500 Beds	\$12,000
Large	Revenue \$500M - \$1B, <500K insured lives, 500+ Beds	\$24,000
Leadership	Largest orgs: revenue \$1B+, 500K+ insured lives, 3,000+ FTE	\$48,000
