Total	5,361	41%	2,947	23%	5,785	45%	12,980

Footnotes:

- 1 In Washington, reported cases of HCV infection are classified as confirmed or unconfirmed. A case is unconfirmed if it has an anti-HCV by EIA (repeatedly reactive) without verification by a more specific test. A case is confirmed if it has one of the following: (a) positive recombinant immunoblot assay (RIBA), (b) polymerase chain reaction (PCR) test result, (c) or detectable viral load (qualitative or quantitative).
- 2 Indicates percentage of gender within chronic hepatitis cases for the county.
- 3 Gender for King County data is not currently available.
- 4 Cases where the county of residence was not identified.
- * Figures less than 5 (including 0) have been omitted to help ensure confidentiality.
