What to do if you were potentially exposed to someone with COVID-19

If you have been exposed to COVID-19, or think you have been exposed, you can help prevent the spread of the virus to others in your home and community. Please follow the guidance below.

Symptoms of COVID-19
Common symptoms are fever, cough and shortness of breath. Other symptoms may include chills, muscle pain, headache, sore throat, and new loss of taste or smell.

How do I know if I’ve been exposed to COVID-19?
You can get exposed when you come into direct contact with the secretions (droplets) of someone who has COVID-19 (being coughed or sneezed on, kissing, sharing utensils, etc.). People often get exposed by a household member or through close contact with another person. Close contact means that you have been within 6 feet of someone with COVID-19 for 15 minutes or more. Some people get COVID-19 without knowing how they were exposed.

Participate in a public health interview
If someone with COVID-19 tells public health they have recently been in close contact with you, you may hear from us by text or phone call. An interviewer will help you understand what to do and what support is available. The interviewer will not tell you who gave them your name.

If you later become ill, they will ask you for the names and contact information of people you were recently in close contact with to notify them about exposure. They will not share your name when they reach out to them.

I had close contact with someone who has COVID-19 but I am not sick. What should I do?
You should stay home and away from others. Check yourself for fever, cough, and shortness of breath for 14 days from the last day you had close contact with the person. Do not go to work or school, and avoid public places for 14 days (self quarantine).

I had close contact with someone who tested positive for COVID-19 and now I’m sick. What should I do?
If you were exposed to COVID-19 and get symptoms, you should stay home and away from other people, including household members (self isolate), even if you have very mild symptoms. Contact your health care provider for a test. Tell them you were exposed to someone with COVID-19 and are now sick.

How long do I need to isolate myself?
1. If you have confirmed or suspected COVID-19 and have symptoms, you can end home isolation when:
   - It’s been at least 3 days with no fever without using fever-reducing medication AND
2. If you test positive for COVID-19, but **have not had any symptoms**, you can end home isolation when:
   - At least 10 days have passed since the date of your first positive COVID-19 test, **AND**
   - You have had no subsequent illness.

More guidance is available for **people who have or are suspected to have COVID-19**.

**What’s the difference between isolation and quarantine?**

- **Isolation** is what you do if you have COVID-19 symptoms, or have tested positive for COVID-19. Isolation means you stay home and away from others (including household members) for the recommended period of time to avoid spreading illness.
- **Quarantine** is what you do if you have been exposed to COVID-19. Quarantine means you stay home and away from others for the recommended period of time in case you are infected and are contagious. Quarantine becomes isolation if you later test positive for COVID-19 or develop COVID-19 symptoms.
