Activities in the Growing Area in 2019
The growing area was sampled a minimum of six times in accordance with the National Shellfish Sanitation Program (NSSP) Systematic Random Sampling (SRS) criteria. The San Juan County Health Department continues to implement pollution identification and correction activities in the region.

Analytical Results of Water Samples
Table 1 summarizes results of the 30 most recent samples collected from the area. All stations meet NSSP water quality standard.

Change in Actual Pollution Sources that Impact the Growing Area
We currently have no information indicating that the area has new sources of pollution.

Classification Status
☑ Well within the classification standards
☐ Meets standards, but some concerns
☐ Meets standards, but threatened with downgrade in classification
☐ Fails to meet current classification standards

Remarks and Recommendations
Table 1 shows that all stations meet the NSSP water quality standard for an Approved classification and the area is correctly classified.

The standard for approved shellfish growing waters is fecal coliform geometric mean not greater than 14 organisms/100 mL with an estimated 90th percentile not greater than 43 organisms/100 mL. The above table shows bacteriological results in relation to program standards.
