Activities in the Growing Area in 2019
The growing area was sampled a minimum of six times in accordance with National Shellfish Sanitation Program (NSSP) Systematic Random Sampling criteria. Station 115 was dropped from sampling. Stations 424-426 were added due to a harvest request to extend the geoduck tract boundaries.

Analytical Results of Water Samples
Table 1 summarizes the results of the last 30 samples collected from the area. Station 412 and Stations 424-426 are located in unclassified areas and have 21 and 3 samples respectively. This summary shows that all stations meet the NSSP water quality standard.

Change in Actual Pollution Sources that Impact the Growing Area
We currently have no information indicating that the area has new sources of pollution.

Classification Status
- Well within the classification standards
- Meets standards, but some concerns
- Meets standards, but threatened with downgrade in classification
- Fails to meet current classification standards

Remarks and Recommendations
Table 1 shows that all stations meet the NSSP water quality standards for an Approved classification and the area is correctly classified.

</table>

The standard for approved shellfish growing waters is fecal coliform geometric mean not greater than 14 organisms/100 mL with an estimated 90th percentile not greater than 43 organisms/100 mL. The above table shows bacteriological results in relation to program standards.

*N/A – SRS criteria require a minimum of 30 samples from each station.*
