Lessons from a Tuberculosis Survivor
A World Tuberculosis Day Webinar

Monday, March 23, 2020 | 12:30—1:30 P.M. Pacific Time

Kristen is a product designer in San Francisco, California. She has a degree in Molecular and Cell Biology from the University of California, Berkeley, met her husband in college, and has travelled all over the world. She was diagnosed with tuberculosis in August 2016 after eight months of misdiagnosis. She is happy and healthy now — and traveling again.

Learning Objectives
At the end of this session participants will be able to:
• Describe a patient’s experience of TB treatment in order to better understand barriers to treatment completion.
• Recognize the impact of stigmatizing language on patients with TB and apply alternative language to improve overall patient outcomes.
• Summarize national and state TB trends to improve timely screening for populations at risk.

HOW TO JOIN
TB ECHO® (Extension for Community Healthcare Outcomes) is a virtual learning community of health professionals that meet weekly, by video conference, to get consultation on their TB-related patients and learn about best practice standards of care. Continuing education credits are available for didactic sessions.
To learn more about TB ECHO® visit www.doh.wa.gov/TBECCHO

Online registration is limited. If you are not enrolled in TB ECHO®, please register for the World TB Day webinar online at:

Contact the Washington State Department of Health TB Program with questions at: 260-418-5500 or tbservices@doh.wa.gov.
