Medical Case Management

My Notes:

1. What is the biggest case management barrier to compliance/tx completion and strategies to overcome it going forward?

2. What is the biggest barrier to community provider participation in any/all parts of TB control and strategies to overcome it going forward?

3. What is the biggest barrier to training, and maintaining a competent TB team, especially in LHJ’s that do not follow large numbers of TB patients and strategies to overcome it going forward?
