Your child is due for a health checkup!
It’s time to schedule a health checkup for your pre-adolescent. Checkups are recommended at 11-12 years and every year after that.

Your child needs the following three vaccines:

**One** dose of Tdap to protect against tetanus, diphtheria, and pertussis (whooping cough).

**Two** doses of meningococcal to protect against meningitis.

**Two or three** doses of human papillomavirus (HPV) to prevent many types of cancers.

Please contact us soon to schedule an appointment. Getting immunized on time will give your child the best disease protection. If your child is no longer a patient of this clinic, please let us know so we can update our records.

We look forward to seeing you soon!
