Introduction
The Washington State Department of Health Data Visualization Dashboards contain a series of interactive dashboards that allow you to explore data on populations and measures of Washington State. The dashboards integrate data from multiple sources, including the American Community Survey (ACS) and Office of Financial Management (OFM).

Tableau Display Settings
End users will be able to access this software using a web browser on any of below supported platforms:

- Chrome on Windows, Mac, and Android 4.4 or later
- Apple Safari on Mac and iOS 8.x or later
- Internet Explorer 11 or newer
- Mozilla Firefox 3.x or later on Windows and Mac
- Desktop Browser (1000 x 800)
- Generic Desktop (1366 x 768)

Display Setting Troubleshooting

**Lag Time:** You may notice lag time when switching between tabs or making a selection from a drop-down menu.

**Chart or Maps are Blank:** When filtering, some data in the charts/maps will disappear due to small number suppression or no data available.

Who should I contact for technical issues or follow-up questions?
If you experience issues at any time while attempting to interact with the portal (e.g., logging in), you can contact the agency’s [Tableau Support Team](#).

*Measure Explorer Overview*

This dashboard enables you to explore and compare two measures at the ACH or county level.

**What kind of questions can this dashboard answer?**
Which ACH's have the lowest number of uninsured residents? How does the percentage of the population living in crowded housing compare to the percentage of the population living in poverty?

**How do I interact with this dashboard?**

You can select a geographic scale (ACH or county) by clicking on the ACH level maps or County level maps link at the top of the page. This selection applies to both maps. Two measures can be selected for comparison and each map will change to display the selected measure. The five highest and lowest rates by region are shown for each selected measure at the bottom of the page. **Hovering your cursor over the map will highlight the map region for both maps.**
Social Determinants Measure Maps

Geography: Accountable Community of Health (ACH)

Click here to view county level maps

Select a Measure
Uninsured

The percentage of the population without health insurance (2011 - 2015)

Select a Measure
Poverty

The percentage of the population living in poverty (2011 - 2015)

---

5 Lowest
- King: 9.7%
- Olympic: 10.4%
- Pierce: 11.3%
- North Sound: 11.5%
- Southwest Washington: 11.7%

5 Highest
- North Central: 17.6%
- Better Health Together: 14.0%
- Greater Columbia: 13.0%
- Cascade Pacific Action Alliance: 12.9%
- Southwest Washington: 11.7%

---

5 Lowest
- King: 11.2%
- Olympic: 12.6%
- North Sound: 12.7%
- Pierce: 12.7%
- Southwest Washington: 13.4%

5 Highest
- Better Health Together: 19.0%
- Greater Columbia: 18.8%
- North Central: 17.1%
- Cascade Pacific Action Alliance: 16.8%
- Southwest Washington: 13.4%
**About the Data**

Data shown in measure maps are from the American Community Survey (ACS). In addition to the census of every U.S. household every 10 years, as required by the U.S. Constitution, the Census Bureau has a sub-sample, yearly survey called the ACS. This representative sample-based survey gathers characteristics for a subset of the entire population of the United States each year.

You can find supporting documentation on code lists, subject definitions, data accuracy, and statistical testing on the ACS website, Data and Documentation section. You can find sample size and data quality measures (including coverage rates, allocation rates, and response rates) on the ACS website in the Methodology section.

**Caveats**

ACS bundles data in one-year, three-year or five-year groups to get more reliable statistical results. In order to have census tract data on all 39 counties in Washington, ACS uses the five-year grouping.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to non-sampling error (for a discussion of non-sampling variability, see Accuracy of the Data).
