

# Wastewater Disposal Plan

## Floatation System Facility Construction Permit Application

---

Float water contains large amounts of Epsom salts (magnesium sulfate), and it may cause problems if it is not disposed of properly.

- If you are discharging float water into the sanitary sewer, obtain a letter from the sewer company stating that they are willing to accept waste float water.
- If you are having waste float water collected by a pumper truck, obtain a letter from the company agreeing to collect your waste float water.
- If you are discharging waste float water in to a septic system, obtain a letter from the local health jurisdiction ([www.doh.wa.gov/localhealth](http://www.doh.wa.gov/localhealth)) who is regulating the system stating that discharging float water into a septic system is within their requirements.

Send the letter and other required application items to:

**WA Department of Health  
Water Recreation Program  
243 Israel Road SE 98501  
Tumwater, WA 98501**
