Publication:  ABC’s of Bites

DOH Pub #:  334-272

Printing instructions:
To print this publication as a booklet from a desktop printer, do the following:

• From the File menu, go to Print.
• Under Print Range, select Pages 2–11.
• Under Page Scaling, select Fit to Page.
• Under Properties, select the following:
  Paper size: letter; Orientation: landscape; Print on both sides: flip over or flip on short edge.

When printing is finished, fold pages in half to form a 5.5 x 8.5” booklet.
a West Nile virus prevention message

ABC’s of Bites

a bit about mosquitoes and tips on how to avoid their bite!

West Nile Virus

About ABC's of Bites

For some, West Nile virus can be a serious, even deadly, disease. It's spread by the bite of an infected mosquito. Most people who are infected with West Nile virus will not get sick. Some people will have mild symptoms. A few will suffer more severe symptoms that can cause permanent health problems.

By reading ABC's of Bites with your child, they'll learn early how to reduce their risk of West Nile virus. It's key that children understand the reason behind taking certain preventive actions. ABC's of Bites expands your child's knowledge about mosquito biology and transmission of the disease. The booklet introduces them to preventive actions such as removing mosquito habitat from around your yard and using mosquito repellents when outdoors.

In the back, you'll find some useful resources. Learn about mosquito control districts and see if there's one protecting your community. Use the handy checklist to keep mosquito populations under control by limiting their habitat.

Our goal is that your child grows up aware and knowledgeable about West Nile virus and practices preventive actions in their everyday life.

Enjoy ABC's of Bites!

P.S. You can learn more about West Nile virus by visiting our website at www.doh.gov/wnv.

What is a Mosquito Control District?

Your local mosquito control district helps protect you against West Nile virus. They use integrated pest management practices to get rid of mosquitoes with the least impact on the environment and people.

They first survey for mosquitoes, both larvae and adults. Then, they reduce any large populations of mosquitoes found using the best control methods for the situation. The fewer mosquitoes, the less chance you'll receive a bite that threatens your health.

Call the local mosquito control district to learn what is being done in and around your community.

Do You Remember Your ABC’s of Bites?

Find and circle them in this word search. If you forget some, look at the list at the bottom of the page.

Have fun and good luck!

---

**A**

Adult mosquitoes deliver an itchy bite and can spread disease.

They bite more often at dawn and dusk, but can bite during the day or night too.

---

**B**

Girl mosquitoes bite to suck blood and get protein to lay eggs.
Mosquitoes only need a little water for their eggs to hatch into young larvae. Sometimes the larvae grow into adult mosquitoes in the **corrugated** drainpipes in your yard.

**D**

**Dragonflies** eat lots and lots of mosquitoes!

**That Mosquito Looks Hungry!**

Help these kids find their way out of the mosquito maze and get to an EPA approved mosquito repellent. There are four ways out. Can you find them all? Good luck!
Where Mosquitoes Call Home

Use this helpful checklist to get rid of places where mosquitoes like to live around your yard. Many of these places are containers where water has collected.

For most containers, use the "Tip-Or-Toss" method to prevent mosquitoes from starting new families. Be a responsible home owner!

- **Tip** (drain or rinse) water from containers
- **Toss** (recycle or landfill) unused containers

- Buckets and Pails
- Old Tires and Tire Swings
- Cans and Bottles
- Toys and Playhouses
- Swimming and Wading Pools
- Wagons and Wheel Barrows
- Bird Baths
- Blocked Gutters
- Corrugated Drainpipes
- Flower Pots and Saucers
- Water Cans
- Tarps and Covers
- Animal Watering Troughs

---

Mosquitoes lay their **eggs** in calm water, like that found in puddles, ponds, and pools.

Mosquitoes **fly** around seeking food. They prefer to stay near cool, shady areas, but some will travel several miles in search of a blood meal.
Mosquitoes hide during the cold winter months. They return when the weather warms up in the spring.

Dirty gutters hold water where mosquitoes can lay their eggs. Make sure a parent keeps gutters clean.

Keeping your yard clean, neat, and free from standing water is the best way to keep mosquitoes away.

Our goal is to have zero people sick with West Nile virus. Help us by doing your part!
West Nile virus is carried by some mosquitoes and can make you sick.

Walk your yard and examine for places where water collects and mosquitoes call home. Use the helpful checklist in the back.

Mosquitoes rest in ivy, azaleas, and other shady bushes.

Many things can hold water. Clean up junk around your yard so mosquitoes don’t have a place to lay their eggs.
A virus is a very small germ that can make you sick. Mosquitoes can carry viruses and pass them to people when they bite.

Even underground drainage pipes can be homes for mosquitoes.

Larvae are baby mosquitoes that grow in water. They are also called "wigglers" and you can see them wiggling around.

After you are done playing in the kiddie pool, make sure a parent empties all the water out so mosquitoes can't lay their eggs.
**Surveillance** means looking for what kind of mosquitoes and how many there are in your neighborhood.

**Mosquitoes** are blood-sucking bugs whose bite may make you sick.

Many different **traps** are used to catch mosquitoes.

Flower **nectar** is like sugar water that all mosquitoes, boys and girls use for their food.

Only girl mosquitoes suck blood.
Outdoor play can be more fun if you keep mosquitoes away.

Larvae change into pupae. Pupae are also called “tumblers” because they tumble in the water when you touch the water’s surface.

Your local health department or mosquito control district can answer your questions about mosquitoes and diseases they spread.

There are many different types of repellents that keep mosquitoes away. Ask your parents to choose a repellent that’s right for you.
