AT THE TAP

No specific action is needed.

AT THE TAP

Consider routine flushing of the affected fixture.

AT THE TAP

Take fixture out of service or reduce exposure through regular flushing or filters.

AT THE TAP

Immediately take fixture out of service and provide bottled water if there is not another source of water.

AT THE SCHOOL

Continue using any lead removal or remediation measures currently in place.

AT THE SCHOOL

Only use cold water for drinking and food preparation.

AT THE SCHOOL

Only use cold water for drinking and food preparation.

AT THE SCHOOL

Only use cold water for drinking and food preparation.

LIKELY RECOMMENDED NEXT STEPS

Institute routine flushing of the fixture or building. Create a quality assurance plan to assure that flushing occurs properly each day.

Prioritize replacement of affected fixtures in Capital Improvement Plan. Taps with higher results (closer to 19 ppb) should be replaced as soon as is feasible.

Retest after actions to assure reduction in lead. Follow advice from DOH or local health jurisdiction.

LIKELY RECOMMENDED NEXT STEPS

Conduct flush test on affected fixtures.

Replace the fixture with a lead free fixture.

Retest after actions to see effects and assure permanent reduction in lead.

Follow advice from DOH or local health jurisdiction.

To get a communications toolkit for lead testing, or for any other questions, call our schools coordinator at 360-236-3248. DOH Publication 334-413, January 2018. If you need this publication in an alternative format, call 800.525.0127 (TDD/TTY call 711).
