

WAC246-310-290(8)(a) Step 1:

Calculate the following two statewide predicted hospice use rates using department of health survey and vital statistics data:

WAC 246-310-290(8)(a)(i) The percentage of patients age sixty-five and over who will use hospice services. This percentage is calculated by dividing the average number of unduplicated admissions over the last three years for patients sixty five and over by the average number of past three years statewide total deaths age sixty-five and over.

WAC246-310-290(8)(a)(ii) The percentage of patients under sixty-five who will use hospice services. This percentage is calculated by dividing the average number of unduplicated admissions over the last three years for patients under sixty-five by the average number of past three years statewide total of deaths under sixty-five.

35 ADC * 365 days per year = 12,775 default patient days
12,775 patient days/59.79 ALOS = 213.7 default admissions
213.7 Default
For affected counties, the actual volumes from these recently approved agnecies will be subtracted, and default values will be added.

Blue cells include proxy counts for new agencies.
Orange cells highlight when a new agency is not included in the count because its survey admits surpassed the minimum default admissions. Therefore actual admits are counted.
