

# Weekly Pertussis Update for Washington State

Washington State Department of Health

## 2024 year-to-date (YTD) confirmed and probable cases reported through 04/20/2024 (week 16).

This update summarizes all reports of pertussis in persons with illness onset dates during [CDC weeks 1 - 16](#). The included reports were received by local health jurisdictions (LHJs) and reported to Washington State Department of Health (DOH) – Communicable Disease Epidemiology. Lab result reporting and case investigations take time, so it sometimes takes 3 to 4 weeks after a positive test for a case to be classified as confirmed or probable pertussis. The data presented in this report is therefore subject to change over time.

There have been a total of 137 cases reported statewide so far in 2024, compared to 22 cases reported by week 16 in 2023. Dates for the 2023/2024 comparison are based primarily on symptom onset dates. For information about pertussis case counts in prior years, please refer to DOH's [Communicable Disease Annual Reports](#) or the [Annual Pertussis Reports](#).

**Figure 1:** Number of Pertussis Cases Reported in Washington State by CDC Week of Symptom Onset: 2023 (blue) vs 2024 (red)

**Figure 2:** WA State Pertussis Cases Reported by Month and Year (black) with Projected Baseline and Epidemic Thresholds (red dashed lines), 2014 through year-to-date 2024<sup>1</sup>

**Table 1:** WA State Pertussis Cases by Age Group, 2024 weeks 1 - 16

Age Group	OFM 2022 Population	Number of Cases	Rate per 100,000 persons	% of cases by age group*
< 1	88,441	13	14.7	9
1 - 4	349,505	25	7.2	18
5 - 9	476,054	21	4.4	15
10 - 13	396,426	27	6.8	20
14 - 18	480,566	27	5.6	20
19 - 24	588,771	3	0.5	2
25 - 44	2,225,672	16	0.7	12
45 - 64	1,911,375	2	0.1	1
65+	1,347,568	3	0.2	2
All ages	7,864,378	137	1.7	100

*\*Due to rounding, percentages may not always add up to 100%*

The overall year-to-date incidence rate is 1.7 pertussis cases per 100,000 Washington residents from weeks 1 through 16, with an incidence rate among infants under one year of age of 14.7 cases per 100,000 (see Table 1). Infants under one year of age are among the most vulnerable to severe pertussis disease.

Of the 13 infants who had pertussis so far in 2024: 12 were old enough to have received a dose of pertussis-containing vaccine, and 1 (8%) had received at least one dose.

**Table 2:** WA State Pertussis Cases by County, 2024 weeks 1 - 16

County	Number of Cases	OFM 2022 Population	Rate per 100,000 persons
Chelan	58	80,648	71.9
King	22	2,317,702	0.9
Douglas	17	43,997	38.6
Clark	16	520,898	3.1
Pierce	6	937,403	0.6
Snohomish	4	847,301	0.5
Skagit	3	131,253	2.3
Grant	2	101,800	2.0
Okanogan	2	42,702	4.7
Spokane	2	550,703	0.4
Benton	1	212,300	0.5
Clallam	1	77,625	1.3
Franklin	1	99,756	1.0
Thurston	1	300,496	0.3
Whatcom	1	231,648	0.4

Among the 15 counties with reported pertussis activity so far in 2024, the number of pertussis cases in a given county ranges from 1 to 58 and county-level YTD incidence rates range from 0.3 to 71.9 per 100,000 persons (see Table 2).

- The median and mean county-level year-to-date incidence rates in counties reporting pertussis activity are 1 and 8.6 per 100,000 persons, respectively.
- 24 counties have reported no pertussis cases as of CDC week 16 of this year.

**Figure 3: Six-Week Pertussis Incidence Rates by County, 2024 weeks 10 - 16**

The incubation period for pertussis is up to 21 days, so six weeks represents two 21-day incubation periods. Outbreaks of pertussis are usually declared over after six weeks have passed with no additional cases. The map above uses the past six weeks of data to highlight areas where the potential for continuing outbreaks exists based on current patterns of reported pertussis disease.
