Off-Site Vaccination Clinic Guidelines

Satellite, temporary, and off-site vaccination clinics play an important role in improving vaccination coverage rates and vaccinating hard-to-reach populations. Vaccination clinics held in these settings have unique challenges and providers must follow specific guidelines for managing publicly supplied vaccine in these non-traditional settings. Below is a checklist of requirements, best practices, and reference materials for your off-site vaccination clinic. Review all materials prior to conducting an off-site vaccination clinic.

Off-Site Clinic Checklist

Preparation
Submit your request to the WA State Childhood or Adult Vaccine Programs for approval before ordering and/or using publicly supplied vaccines for an off-site vaccination clinic. <i>See Appendix A.</i>
After receiving approval for your off-site clinic, determine the amount of vaccine needed and place an order at least three weeks prior, for CVP or available AVP vaccines, in the Immunization Information System (IIS).
When receiving the vaccine at your facility, store the vaccine at the correct temperature, verify the doses received, and <u>receive the vaccine inventory</u> in the IIS prior to the clinic.
Ensure you have a working digital data logger with a current certification of calibration for use at the clinic. This digital data logger must be in addition to the digital data logger that is recording temperatures in your permanent storage unit.
Ensure you have all necessary materials to pack and transport the vaccines for the off-site clinic.
Transport
 Vaccines must be transported using a portable vaccine refrigerator or qualified container and pack-out designed to transport vaccines within the temperature range recommended by the manufacturers (i.e., between 2–8° Celsius or 36–46° Fahrenheit for ALL refrigerated vaccines). Coolers available at general merchandise stores or coolers used to transport food are NOT ACCEPTABLE. See CDC's Vaccine Storage and Handling Toolkit for information on qualified containers and pack-outs: www.cdc.gov/vaccines/hcp/admin/storage/toolkit/storage-handling-toolkit.pdf. If planning to transport frozen COVID-19 vaccine: Pfizer COVID-19 vaccine multi-dose and single dose vials can be transported at ultra-cold temperatures (-90°C to -60°C or -130°F to -76°F) or at refrigerated temperatures (2°C to 8°C or 36°F to 46°F). The vaccine can be stored for 10 weeks at refrigerated temperatures and up to the expiration date at ultra cold temperatures. This vaccine should not be stored at regular freezer temperatures. Moderna COVID-19 vaccine can be transported at regular freezer temperatures (-50°C to -15°C or -58°F to 5°F) or at refrigerated temperatures. For both vaccines: If vaccine is thawed and transported at 2°C to 8°C (36°C to 46°F), vials should not be refrozen and should be stored at 2°C to 8°C (36°F to 46°F) until use. The refrigerated beyond use date should be recorded on the carton after the transfer.
Use a <u>digital data logger</u> that meets state and CDC guidelines for public vaccine. The person transporting the vaccines confirms manufacturer instructions for packing configuration and proper conditioning of coolants were followed. (Your qualified container and pack-out should include packing instructions. If not, contact the company for instructions on proper packing procedures.)

Adult and Childhood Vaccine Programs

Adult Vaccine Program: waadultvaccines@doh.wa.gov Childhood Vaccine Program: wachildhoodvaccines@doh.wa.gov | (360) 236-2829

If planning to administer varicella-containing vaccine, bring only the amount needed for the clinic. (CVP ONLY)
Varicella containing vaccine requiring freezing temperatures will lose viability within 72 hours once the vaccine warms above
15 degrees Fahrenheit. Never re-freeze varicella-containing vaccine.
If planning to administer Mpox* vaccine, bring only the amount needed for the clinic.
Keep frozen at -25°C to -15°C (-13°F to +5°F). Store in the original package to protect from light. Do not re-freeze a vial once it has been thawed. Once thawed, the vaccine may be kept at +2°C to +8°C (+36°F to +46°F) for 4 weeks.
Ensure the total time for vaccine transport and clinic workday does not exceed 8 hours.
Storage and Handling
Ensure the cold chain is maintained at all times during transport and throughout the clinic.
Providers may pre-draw up to 10 doses of vaccine at a time during an off-site clinic. All remaining
pre-drawn doses must be discarded and logged as waste at the end of the clinic.
Monitor digital data logger(s) and record temperatures on paper temperature logs hourly. See Appendix B.
o Off-site clinic temperature logs should be submitted to the Washington State Childhood or Adult Vaccine
Program after your event.
For additional COVID-19 vaccine storage and handling, refer to State Supplied COVID-19 Vaccines at-a-Glance
After the clinic, download and review digital data logger temperature data.
If vaccine went out of appropriate temperature ranges, follow the <u>Vaccine Temperature Excursion Guide</u>
Complete the <u>Vaccine Loss Log</u> for any wasted vaccine doses.
*If transporting Mpox vaccine along with other frozen vaccines, make sure temperatures in qualified container and
packout/portable storage unit are between -25°C and -15°C (-13°F and +5°F).
